

NS3 Product Suite

Share One's Clients benefit with NS3 technology.

NewSolutions core software was developed in a Windows-based design to leverage universal technology languages. With this solid core foundation, our NS3 technologies will take our credit union clients into the next stage of service for your members.

Share One's API – NS3

Share One's NS3 modules makes web-based integration and customization easy and seamless.

Our API is the answer for creating expansion efficiencies and allowing our clients the ability to offer more customized services for their members faster than ever before.

NS3 technology takes your credit union from a multi-channel delivery system—where all channels of banking are available to the member—to an Omnichannel delivery system—where all channels of banking are connected.

The NS3 suite of products currently consist of:

NSHome NSJoin NSLoan NSMobile NSReports

These products when customized for a credit union by Share One will result in the ability to provide a smooth, ordered process that utilizes the strength of the core with the agile and responsive design of the NS3 products and eliminates the “siloed information” which the multi-channel approach provides.

NSHome – Combine dual-authentication security with convenient access for your membership with this fully branded 24-hour Internet banking delivery channel.

Features/functionality

- Fully customizable to coordinate with your credit union's current branding
- Real-time transaction history for loans, share drafts, savings, and credit cards is integrated in one location.
- Written in a responsive design which allows access via smartphones and tablets and automatically reads the device and adjusts screen size accordingly.
- Custom links allow members to pay bills, make deposits through remote deposit capture, access archived statements, tax information, credit union's newsletters, and order checks.
- Members can update personal data recorded in the core.
- Personal Financial Management via MX is available so your members can plan and budget their money. This creates an affordable, value-added relationship with your members for your credit union.
- Personal, targeted banner ads can be configured specifically to your members so advertising can speak to their specific needs with DeepTarget, a standard feature of NSHome.

- With NSJoin and NSLoan, prospective members and existing members can apply to join the credit union or apply for a loan. These solutions offer paperless transactions that improve operating efficiencies.
- The NSHome administrative portal is available to the credit union administrator(s) and offers a solution to troubleshoot member data with a record of each incident, allows extensive customization of menu settings changes. Secure emails sent by members to the credit union are monitored within this area.

NSJoin – Web-based, next generation technology collects new member applications online via tablets, smartphones, and home computers. Capture and queue new member applications without paper forms. This process allows a credit union to verify membership eligibility and holds all data within the core so upon approval, member data can be retrieved and verified for new membership share accounts. Electronic signature and ACH origination will further enhance this module.

NSLoan – Web-based, next generation technology allows loan applications to be collected online via tablets, smartphones, and home computers. Existing members can apply for a loan and core data will prepopulate the form with member data from the core. That data can also be edited, allowing the member to update contact information if needed.

NSMobile – This application is a totally integrated mobile banking solution highlighting a full mobile experience for your members featuring a fully customizable credit union NSMobile app available for download from the App Store or Google Play for iPhones, iPads, and Androids.

The module provides a seamless integration with NSHome and NewSolutions and will enhance the omnichannel process to bring all digital banking channels together for the tightest integration possible.

The member experience begins with an authentication process that will verify the member and their device. Once complete all future logins can be authenticated by touch identification if the member selects this option. Members will be able to join the credit union, apply for a loan, locate a branch or ATM , and contact the credit union, by just launching the icon.

The member will have access to quick balances at a glance with a simple swipe down after opening the app, before the login process.

Many features are available via the menu and are fully customizable per credit union.

- NSJoin and NSLoan options are available on the log in screen
- Real-time transaction history for loans, share drafts, savings, and credit cards are integrated in one location.
- Targeted marketing allows the credit union to make offers based on individual criteria.

Transfers: account to account, person to person, scheduled, pending ACH and check withdrawal

- transfers are available.
- Online Services: EStatements, bill pay, check order, MoneyDesktop, member alerts, loan application, tax information, notices, external credit cards, stop payments
- Card management: put card control in your members hands, allow members to temporarily disable debit/credit cards.
- Remote Deposit Capture: allows members to securely deposit checks with their device.
- Pay a Person: allows members to send money to anyone via text or email.
- Member Service: allow members to manage profile settings, customize account naming, configure overdraft preferences and more.
- Rates and Loans: display current rates and integrate NSLoan for loan application requests.
- Locations and ATM: list all branch locations, hours, contact info, directions and identify ATMs.
- Settings: members can configure optional settings like quick balances, offers, push notifications, and touch ID.

NSReports – This free analytic tool is available to any credit union that currently uses any of the NS suite of product line currently deployed. Each chart is printable and can be saved digitally in a wide variety of file types for easy insertion into your reporting documents.

Your credit union's NSReports home page includes a map(s) of member logins and usage information based on your product suite. Each map displays the current month usage for the corresponding NS3 product and can zoom in on a high concentration area to reveal those numbers by city location.

With the NSHome analytics dashboard, you can compare monthly user data in side-by-side charts. You can view maps showing total and new member logins. Hovering over the map reveals actual numbers and date values. There are also charts breaking out device and browser usage.

Because Share One's NS3 Technology is nimble, new product selections will continue to develop and become available to the product suite in the future.
