

FOR IMMEDIATE RELEASE

Menard and USW Continue Growth with New Offices in Tampa and Minneapolis

PITTSBURGH – January 5, 2018 – Pittsburgh-based ground improvement specialists Menard Group USA are starting the New Year with the opening of two new regional offices.

Tampa's office, the new branch of USW, was established to serve the quickly growing southeast markets with soil conditions well adapted to our ground improvement techniques, including Florida, Mississippi and Alabama and South Carolina. The Tampa office will be led by Maysill Pascal, PE.

Kyle Shatzer, P.E. will be leading efforts out of the Minneapolis Menard office, which will service Minnesota, Iowa, Nebraska and North and South Dakota, areas that are primarily comprised of soft, clay-like soils. Menard has already had great success in the Midwest, most recently with the ground improvement efforts for the Minnesota DOT's Nine Mile Creek Project.

"These two new offices really help us to provide more localized solutions to our customers in the Southeastern and Midwestern regions," said Frederic Masse, President, Menard Group. "We're looking forward to success in both regions, and our clients are in great hands with Maysill and Kyle."

Both offices were open for business as of January and are part of more than a dozen regional offices across the country to serve clients.

About Menard Group USA:

Menard Group USA is a design-build specialty geotechnical contractor offering expertise in ground improvement for sites with poor soil. By combining value engineering and innovative techniques, Menard Group USA delivers practical, sustainable solutions that can be attractive alternatives to deep (pile) foundations. As part of an international network of geotechnical resources and expertise, our team brings in-depth knowledge and creative problem solving to every project.
