

COVID-19 VACCINE

Vaccine eligibility for healthy adults ages 16+:

Delaware - **April 6**

Maryland - **April 12**

D.C. - **April 19**

Guidelines for CAA vaccine participation

- Program planners should consider community characteristics, such as **mobility and fragmentation of health care**, when selecting interventions.
- **Partnerships** between community organizations and vaccination providers are likely to be essential components of effective, sustained community-based efforts.
- **Intensive combinations of interventions** (e.g. home visits, monetary and in-kind incentives) may be necessary to increase vaccination rates in populations that continue to have low rates of immunization after less intensive methods (e.g. client reminders, provider reminders) have been implemented.

Key CAA Resources

– Most effective methods of intervention
