

# Real-Time Prescription Benefit and Electronic Prior Authorization Advantages

This combined solution helps you improve price transparency and increase prescription efficiency. Prescribers nationwide are using it to inform their decisions with the best possible information and to reduce inefficiencies across their practices.

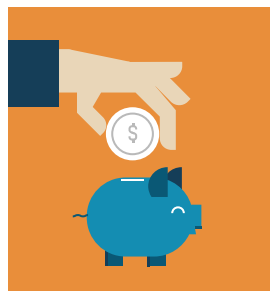

## 28%

**change rate to avoid prior authorizations**

When prescribing a medication requiring a prior authorization and presented an alternative without a prior authorization, prescribers using Real-Time Prescription Benefit switched the drug 28% of the time.

## Key advantages

- Enhances your everyday EHR workflow, adding access to real-time, patient-specific benefit information and a complete, guided prior authorization process
- Brings price transparency into your conversations with patients, informing your prescription decisions with actionable intelligence
- Surfaces clinically viable alternatives that may be better options or have a lower cost for the patient
- Helps avoid the prior authorization process altogether when it's not necessary, or when other options exist
- Replaces faxes and phone calls with electronic, automated processes
- Connects to the largest network of PBMs and health plans in real time to offer valuable point-of-prescribing insights
- Lays the foundation for positive patient experiences — from the point of care all the way to the pharmacy counter

Up to

## \$8,032
