

TVA ALLIANCE TEAM

Temperature/Symptom Screening Guidelines (COVID-19)

Purpose:

The purpose of this plan is to screen essential workers for COVID-19 prior to entering the facility, to reduce the potential spread of viruses and illness. All essential personnel entering the Protected Area at TVA's generating facilities shall be screened as outlined in this guideline. Individuals failing to meet the requirements set forth in this guide or refusing screening will be asked to go home and contact their personal Health Care Provider. Anyone sent home will be required to report to TVA medical prior to returning to work.

Screening will be conducted in accordance with manufacturer's recommendations for the no-touch thermometer utilized.

*** Two (2) temperature readings over 100.4 with the thermometer will result in the denial process. Access may also be denied based on verbal responses which are outlined in the questionnaire below.

After the first attempt ≥ 100.4 degrees, the employee will be asked to move to a designated location for a secondary screening.
