

**Fiscal Year (FY) 2022 (3Q19, 4Q19, 1Q20, 2Q20) Inpatient
Hospitals Selected for Chart-Abstracted Data Validation**

All selected hospitals are validated for both the chart-abstracted clinical process of care measures, as well as Healthcare-Associated Infection (HAI) measures.

Clinical process of care cases will be randomly selected from data submitted by the hospital to the CMS Clinical Data Warehouse.

HAI candidate cases will be randomly selected for the following HAI measures: central line-associated blood stream infection (CLABSI), catheter-associated urinary tract Infection (CAUTI), Methicillin-Resistant Staphylococcus Aureus (MRSA) laboratory-identified (LabID) events, Clostridium difficile Infection (CDI) LabID events, and Surgical Site Infection (SSI).

Selected hospitals will provide two of four lists of positive cultures each quarter. Hospitals will submit either (but not all four):

- CLABSI and CAUTI Validation Templates; or,
- MRSA and CDI Validation Templates.

The following list of selected hospitals displays the HAI Validation Template type for which each hospital has been randomly assigned to submit.

Hospitals must fill out HAI Validation Templates before they receive a medical records request.

Hospitals do not fill out templates for SSI cases.
