CANCER EXPERIENCE REGISTRY®

A PROGRAM *of the* CANCER SUPPORT COMMUNITY

Cancer Experience Registry®

The Cancer Experience Registry is a web-based research initiative available to those affected by cancer that provides an opportunity for cancer survivors and informal caregivers to make their voices heard and to share their stories. This is accomplished through multiple choice and open-ended questions designed to capture their experience, including:

- Communication with their healthcare team about diagnosis, treatment, and survivorship
- The effects of cancer on quality of life (including family, work, finances, distress, and well-being)
- How to effectively meet the psychosocial needs of patients and their caregivers, as well as to assist patients in expressing those needs during cancer care

In addition to a core questionnaire that all participants complete, the Cancer Experience Registry also includes disease-specific surveys, including one for survivors of Breast Cancer.
