Key Messages for Hurricane Milton
Advisory 17: 4:00 AM CDT Wed Oct 09, 2024

1. A large area of destructive storm surge, with highest inundations of 10 ft or greater, is expected along a portion of the west-central coast of the Florida Peninsula. If you are in the Storm Surge Warning area, this is an extremely life-threatening situation, and you should evacuate as soon as possible if ordered by local officials.

2. Devastating hurricane-force winds are expected along portions of the west coast of Florida, where a Hurricane Warning is in effect. Milton is forecast to remain a hurricane while it crosses the Florida Peninsula and life-threatening hurricane-force winds, especially in gusts, are expected to spread inland across the peninsula. Preparations to protect life and property, including being ready for long-duration power outages, should be rushed to completion.

3. Heavy rainfall across the Florida Peninsula through Thursday brings the risk of catastrophic and life-threatening flash and urban flooding along with moderate to major river flooding, especially in areas where coastal and inland flooding combine to increase the overall flood threat.

Observational Perspective: Milton remains compact as deep convection surrounds a visible eyewall. Decent outflow remains evident with rain banding near the southern edge of the system. Scattered convection is spreading poleward which may hint to increased vertical wind shear north of the system. Overall, Milton has maintained a well-defined structure as it tracks within a more favorable environment. Current maximum sustained winds have been measured at 140kt (160mph).

Intensity Forecast: Hurricane Milton continues to track within more favorable conditions of very warm seas, low to moderate wind shear, and sufficient moisture. As the system is guided further northeast, vertical wind shear may increase which will work to limit the peak intensity. Regardless, the pre-existing warm seas and moisture will persist which will ultimately fuel the ongoing development. Some weakening remains possible; however, Milton is likely to maintain hurricane status just before landfall later this evening and into Thursday morning. As the system is guided into the Atlantic by the end of the week, the increased vertical wind shear and drier air may create a less favorable environment allowing Milton to weaken. Confidence remains high in the near-term though becomes more moderate towards landfall as the system potentially encounters less favorable conditions.

Track Forecast: Milton continues to track to the northeast as it guided by a strong short-wave trough to the north and developing low pressure near Florida. Further small shifts in landfall location remain possible, but consensus on landfall slightly south of Tampa Bay is expected. After moving through Florida, Milton will continue east into the Atlantic. Confidence remains high in the track forecast.

Cape Coral FLORIDA	**CAPE CORAL EMERGENCY MANAGEMENT** **EMERGENCY OPERATIONS CENTER** **FLASH REPORT #06**	**DISTRIBUTION STATEMENT** **APPROVED FOR PUBLIC RELEASE** **DISTRIBUTION IS UNLIMITED**

NWS-TAMPA DETAILED FORECAST:

Today: Tropical storm conditions possible, with hurricane conditions also possible. Showers and thunderstorms likely, then showers and possibly a thunderstorm after 11am. Some of the storms could produce heavy rainfall. High near 85. Chance of precipitation is 90%. New rainfall amounts between 1 and 2 inches possible.

Tonight: Tropical storm conditions expected, with hurricane conditions possible. Showers and possibly a thunderstorm before 11pm, then scattered showers and thunderstorms after 11pm. Some of the storms could produce heavy rainfall. Low around 78. Chance of precipitation is 80%. New rainfall amounts between three quarters and one inch possible.

Thursday: Tropical storm conditions possible, with hurricane conditions also possible. Scattered showers and thunderstorms, mainly before 2pm. Mostly cloudy, with a high near 83. Chance of precipitation is 40%.

Thursday Night: Isolated showers before 8pm. Mostly cloudy, with a low around 73. Breezy, with a north northwest wind 11 to 18 mph, with gusts as high as 30 mph. Chance of precipitation is 10%.

Friday: Mostly sunny, with a high near 84. Breezy, with a north northeast wind 11 to 15 mph, with gusts as high as 22 mph.

Friday Night: Mostly clear, with a low around 70. North northeast wind 8 to 13 mph, with gusts as high as 20 mph.

Saturday: Sunny, with a high near 86. Northeast wind 9 to 11 mph.

Saturday Night: Partly cloudy, with a low around 72. East northeast wind 6 to 10 mph.

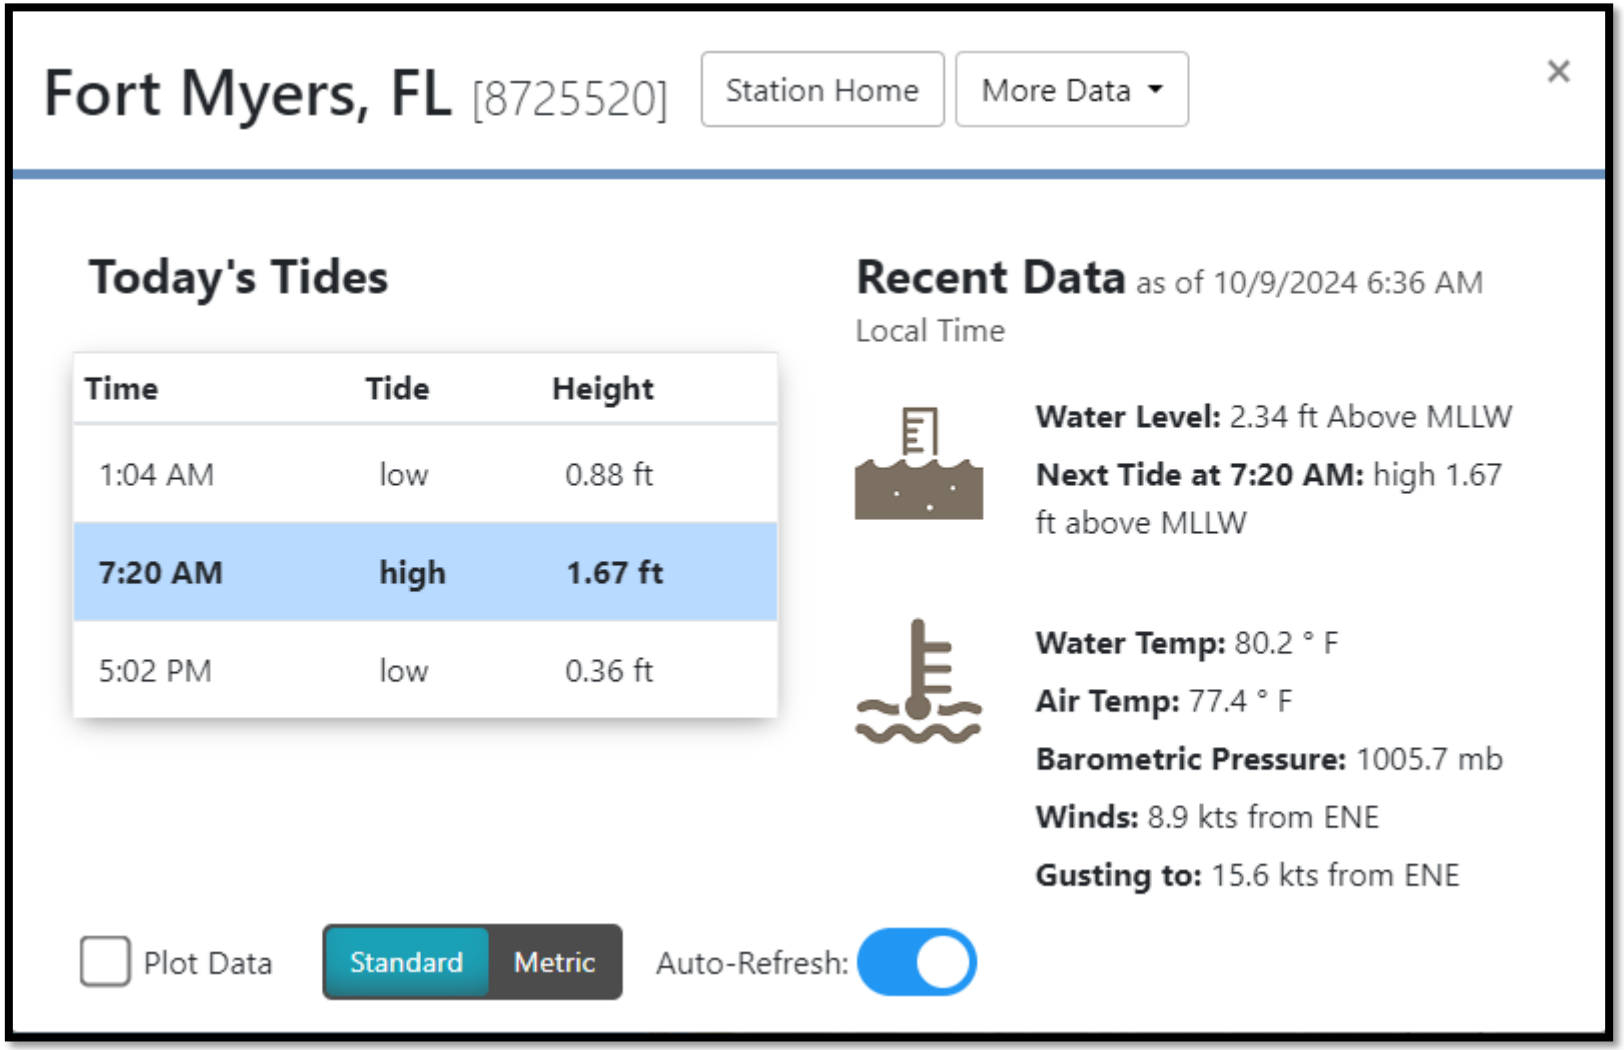

Sunday: Isolated showers and thunderstorms after 2pm. Mostly sunny, with a high near 84. East wind around 8 mph. Chance of precipitation is 20%.

Sunday Night: Isolated showers and thunderstorms. Partly cloudy, with a low around 73. Chance of precipitation is 20%.

Columbus Day: Scattered showers and thunderstorms. Mostly sunny, with a high near 85. Chance of precipitation is 30%.

Monday Night: Scattered showers and thunderstorms. Partly cloudy, with a low around 73. Chance of precipitation is 30%.
