

Aerial view of Ottawa's wastewater reclamation plant...

Vat where all foreign materials are centrifuged out of human waste...

Foreign material once extruded is delivered to Fr. Co. Transfer Station.

With foreign material removed, waste & water moves to a cell where an anerobic digestion process breaks down organic matter and transforms human waste into a disposable, safe solid.

Extruded human solids loaded on truck for delivery outside of Ottawa...

Once solids and waste are treated and separated, water is released to the Maires des Cygnes...
