C.A.P. Trail in PINAL COUNTY

WHAT IS THE CAP TRAIL?

In addition to a reliable supply of Colorado River water, the Central Arizona Project (CAP) canal system affords another potential benefit to the state of Arizona - a long distance, non-motorized, multi-use recreational trail corridor. The trail was considered before any feature of the canal was built and was included in the environmental study that looked at the potential impact the CAP system would have on the environment and wildlife. This study, not only ensured compliance with state and federal regulations to protect native fish, wildlife and plants, but it also considered the opportunity for a recreational trail to be constructed along the entire 336 mile length of the canal. Once completed, the Central Arizona Project Trail would be the second longest trail in Arizona behind the Arizona Trail.
