

Faith and Science:
The Choices We Make

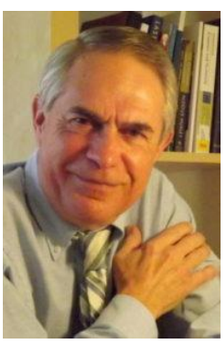

Monday-Friday, July 8 – 12, 2019

Keynote Speakers:

Dr. Jennifer J. Wiseman

Dr. Wiseman is the Director of the AAAS Dialogue on Science, Ethics, and Religion (DoSER) program. She also is an astrophysicist at NASA, where she is the Senior Project Scientist for the Hubble Space Telescope, and she studies the formation of stars and planetary systems using radio, optical, and infrared telescopes. She is a public speaker and author, and she remembers attending a retreat at the Craigville Retreat Center when she was undertaking her graduate studies.

Rev. Dr. Ron Cole-Turner

Prof. Cole-Turner holds the H. Parker Sharp Chair in Theology and Ethics at Pittsburgh Theological Seminary. He is a member of the Executive Committee of the International Society for Science and Religion and one of the Co-Chairs of the American Academy of Religion Unit on Human Enhancement and Transhumanism. He has served as an ordained minister with the United Church of Christ, and he was a keynote speaker for an earlier Craigville Theological Colloquy.

The 2019 colloquy will be the 36th gathering. As ever, attendees will encounter those from various faiths and faith journeys, all gathered for a time of discussion, reflection, challenge, worship, and prayer. We hope you find the topic and description interesting and will consider joining us. The roots of the Colloquy grew from efforts of leaders and thinkers within the United Church of Christ in the early 1980s to gather, engage, reflect and share. Today the leadership, attendees, and speakers represent the breadth of Christ's Church.

The full-week colloquy experience includes:

Presentations, Bible reflections, daily worship services, small group discussions, singing in the choir, playing music, many ways to renew or make new friendships, free time to enjoy the beach and explore Cape Cod, hospitality events, meals, lodging, and three continuing education units.

Also speaking will be two long-time participants at the Craigville Colloquy.

Dr. Nelson Hartunian, received a BS/MS from Tufts University in Engineering and Applied Physics, and a PhD in Theoretical Physics from Brandeis University (**Thesis**: *Mechanism to explain the Solar Corona, why is it a 1000 times hotter than the surface of the sun*). He is a founder of Smart Software, currently serving as board chairman and treasurer of SmartCorp. Nelson lives in Craigville Village, and has attended many past colloquies.

Rev. Richard Coleman is a longtime participant of the Colloquy and member of the planning committee. A retired pastor, Richard has a passion for the history and philosophy of science, which has led to the publication of three books on the intersection of Christian theology and science. His latest, **State of Affairs: The Science-Theology Controversy**, is both a review of the new rapprochement that has taken place of the last fifty years, and a critical reflection of what is right and wrong in contemporary attempts to integrate science with the world of faith and theology. Holding degrees from Johns Hopkins University and Princeton Theological Seminary, and a deep commitment to stay informed about *CRISPR* and Artificial Intelligence, Richard eagerly anticipates leading a dialogue on Monday evening.
