

T-Mobile

Meet Jane.

Her company chose
Galileo Enterprise Connect.

When Jane's primary broadband connection is lost...

- Jane can make and receive phone calls.
- Her branch offices are running smoothly.
- She can access cloud applications.
- Jane's customers are placing orders.

Meet Bob.

His company didn't.

When Bob's primary broadband connection is lost...

- Bob's cash registers are down.
- His digital signage isn't functioning.
- He can't access email.
- Bob is losing revenue (and his mind).

DON'T BE A BOB

Why does my business need Enterprise Connect?

Internet service outages can have a significant impact on your business, and for many years businesses have had only two brutal options. One has been to simply grin-and-bare it through an Internet service disruption, or spend a ton of money to buy an expensive redundant landline connection.

Until now that is. **Enterprise Connect™ 4G LTE** connection makes it affordable for any size business to have failover internet connectivity so your voice and data services remain online at all times. Don't worry, put your feet up!

How does it work?

Enterprise Connect™ sits idle over an always-on wireless connection¹, so that when your business's primary internet line fails, disruption is detected and Enterprise Connect™ instantly moves the internet connection over to a wireless data network on T-Mobile, Verizon, AT&T or Sprint. When your primary connection comes back, your internet automatically switches back over to that connection.

Enterprise Connect™ allows your business to stay connected when your primary internet connection fails, allowing your business and employees to continue making sales, taking orders, sending emails, being productive!

What's Included?

Enterprise Connect™ provides a field proven Internet failover solution. Each system is integrated and activated at our facility for turnkey deployment and contains:

- Enterprise grade wireless router with dual SIM slots, dual WAN ports, WiFi ready
- SIM card activated on 4G LTE network
- Static IP
- Rate plan (1GB to 2GB minimum – higher plans available)
- Line monitoring, reporting and full tech support

How much does it cost?

Enterprise Connect service bundles start at \$39.95 per month.²
