

WORKSHOPS ANNOUNCED

NC Wildlife Action Plan & Web-based Spatial Modeling Tools Workshops

The N.C. Wildlife Resources Commission will host several one-day workshops to introduce the 2015 NC Wildlife Action Plan and introduce two new web-based spatial modeling tools. A “Threats Assessment” tool and “Conservation Opportunity Area” tool were developed to support the priority conservation actions described in the Plan. Register by visiting <http://www.ncwildlife.org/plan>.

The free workshops will include presentations by other partners on programs that implement the Wildlife Action Plan, including:

- information on the NC Wildlife Resources Commission’s Green Growth Toolbox, a technical assistance and GIS planning tool
- information on the Wildlife Conservation Lands Program, a reduced assessment program that provides property tax relief to private landowners for qualified lands
- an overview of the NC Forest Service’s Forest Action Plan and regional forest management and conservation topics
- an update on the NC Division of Water Resources, Basin Planning Unit’s river basin plan revisions and watershed management and conservation priorities
- an overview of the NC Watershed Stewardship Network which serves to connect anyone working on watershed efforts with education, planning, and management resources.
- an update on the NC Division of Mitigation Service’s Watershed Functional Prioritization Tool used to identify priority areas to implement restoration projects

[Workshop registration is now open](#) and we encourage wide participation by partners and stakeholders.

All workshops held 9:30 am – 4:00 pm (with time for breaks and lunch on your own)
