Email to be sent to students:

        Employers increasingly want to hire college graduates who understand the process of innovation. COMMS 3000X, a 3-credit course being offered Spring Semester, will help you develop that expertise. You will work in small teams to come up with a solution to a *real world*-based innovation challenge that will be evaluated by an industry professional. By the end of the semester, you will have exercised a set of skills – creativity, critical thinking, collaboration – that can separate you from others as you prepare to enter a workplace that is complex, competitive and exciting.

        Much of this class will consist of you and a few other students meeting in teams during class time (M-W-F at 12:55 p.m.) or at a time chosen by the team. There will be weekly video-conferencing team check-ins with instructors during the scheduled class time. Occasionally, the class will meet in person.

        For more information and a copy of the course objectives and syllabus contact the instructors: Jean Marie Cackowski-Campbell (cackowsk@ohio.edu) or Andy Alexander (alexanda@ohio.edu)
