STEEL ALLOY FRAME WITH CARBON

In general, except for costly titanium, steel is the strongest bike frame material. Steel bikes last seemingly forever. Although steel is very strong, it is not so stiff as aluminum and therefore gives a gentler ride. Steel is not brittle - it will bend but not break or shatter. Steel bikes are often lighter than aluminium - because steel is stronger, less material is needed. Small amounts of carbon were added for additional strength. Shot blasted for strength and bake painted for beauty.
