

UCLA Summer Institute on Scientific Teaching

July 15-18, 2019 | Hershey Hall

The Summer Institute (SI) is part of a national effort to improve college education in science, technology, engineering, and math (STEM) and to enhance the academic success of *all* students by helping current and future faculty develop and adopt inclusive and effective teaching practices. The SI is a nationally recognized, prestigious teaching development program that has trained more than 1,000 faculty in evidence-based instruction over the last decade, including over 100 UCLA science faculty, some of whom will serve as facilitators of this esteemed 4-day institute this summer.

UCLA faculty and instructors from all STEM departments and interdisciplinary programs are invited to participate. Also encouraged to apply are postdoctoral fellows in UPLIFT and the Chem/Biochem Teaching Scholars programs as well as graduate student TACs for UCLA's TA training courses. In addition, faculty from institutional members of the Southern CA Regional Collaborative are welcome to join us at this year's SI.

Please visit the CEILS website for additional information and to submit application:
