

Dear Alumni, Students, Faculty, Staff, Donors and Friends, we are excited to have completed the Spring 2024 semester. Our Summer 2024 semester has already begun and is off to a great start. To echo Dr Naber's message, we have been very focused on recruiting and engaging enrolled students in all our academic programs. This past year, three of our faculty participated in the university wide initiative to mentor first year students. I personally participated and found this activity rewarding. I was able to meet with my students in both the Fall and Spring semesters and found them to be very excited about being at UofL, Speed School and to be a part of ECE! We

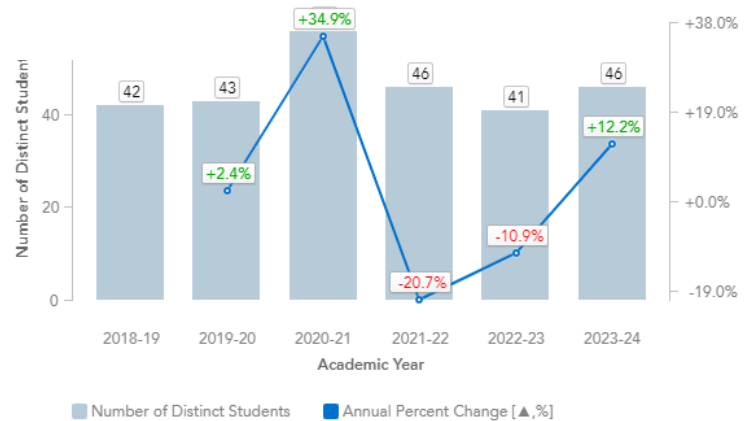

have seen strong enrollment in our undergraduate program, with an annual increase of 11.0%, see the figure below.

Trends in Student Enrollment in Programs by Academic Year

Our department has also seen growth in enrollment in our Masters programs. We continue to offer both the Master of Engineering and Master of Science in Electrical Engineering. The figure below shows 12.2% growth in these programs in the last year.

Enrollment in Programs by Academic Year

Our Online Master of Science in Electrical Engineering has received two accolades of "Best Online Programs 2024 for Graduate Engineering" and "Best Online Programs 2024 for Veterans in Graduate Engineering" by US News and World Reports [1]. We continue to grow our course offerings for this program with 10 online courses. These are also a popular choice for on campus students in all our academic programs. Our PhD program enrollment is remaining steady and strong, which is reflection of our faculty's success in research productivity. We will continue to share our progress on student engagement and enrollment as numbers come in for the Fall 2024. It's a great time to be here at UofL.
