

Urban Water Series

Rain Gardens and Water for Wildlife

September 21, 2019

Saturday, 9 am — 12 noon

Texas A & M AgriLife Extension—Comal
County

325 Resource Drive

New Braunfels, TX 78132

(830) 620-3440

A rain garden is a landscape feature consisting of a shallow depression to collect storm water runoff from roofs, parking lots and other impervious surfaces. The main function of the rain garden is to retain and treat storm water instead of allowing the storm water to runoff the property carrying contaminants and eroding the soil. Water for Wildlife will help you develop supplemental water sources for wildlife that are being impaired by lack of water. We will also have a wildlife guzzler for a demonstration.
