

HOW DOES IT SPREAD?

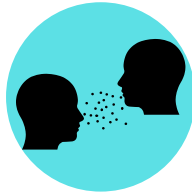

Mpox is a virus that can spread through close, personal, often skin-to-skin contact, including:

DIRECT CONTACT with mpox rash, scabs, or body fluids.

TOUCHING OBJECTS AND FABRICS used by a person with mpox.

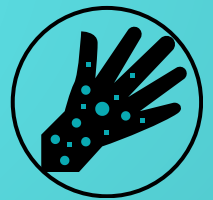

INTIMATE PHYSICAL CONTACT, such as kissing, hugging, or sex.

Contact with **RESPIRATORY SECRETIONS**.

WHAT ARE THE SYMPTOMS?

A rash often occurs that may be located all over the body and/or near the genitals. During this time, a person may not have other symptoms and feel fine. The rash can initially look like pimples or blisters and may be painful or itchy. Mpox can spread to others from the time symptoms start until the rash scabs, fully heals, and a fresh layer of skin has formed.

OTHER SYMPTOMS

RESPIRATORY

BODY ACHES

SWOLLEN
LYMPH NODES

FEVER &
CHILLS

HEADACHE

EXHAUSTED

VACCINATION RECOMMENDED FOR THOSE WHO:

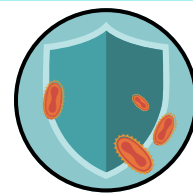

Have a weakened immune system because of another illness.
