

Aerospace Engineering Week

AMS 8th Grade Advanced Engineering students started off the Aerospace Engineering Week with a guest engineer. Rick Heller (Mrs. DiSanti's dad!) virtually visited our classes to show over 40 years of work in the field of aerospace engineering...including the F/A-18 Hornet, the Delta IV Heavy Rocket, and the 787 Boeing Dreamliner. Students finished off the week with a "choose your own adventure" engineering design challenge: choice of an egg drop project, a paper airplane design lab, or a lunar lander simulation. Check out the "epic" videos of some of the *eggcellent* egg drop projects.
