# The Canadian Electrical Contractors Association.

# Working for You!

### ELECTRI International/NECA Electrical Contracting Innovation Challenge (ECIC)

We are looking for electrical contractors to participate in this years ELECTRI International Electrical Contracting Innovation Challenge (ECIC). If you would like to be involved in the competition by assisting and mentoring our student chapter engineering students, please let us know. All interactions with students are remote so distance between contractor and students does not matter. Student teams will be working to design and construct an innovative electrical system for a new residence hall. More information can be found at the following website.

https://electri.org/education/green-energy-challenge-competition/2021-challenge/

### Advocacy

CECA continues to work on addressing issues with tender documents from PSPC. This includes issues with wage rate, acquisition clause issues, change order issues and all other issues as identified in contractor feedback. Feedback can still be submitted.

Update on "The Impact of Pre-Project Investment and Quality of Documents on Project Delivery Efficiencies", all feedback that was received from electrical contractors was submitted for inclusion in the "Impact of Design Documents on Construction Costs" report. We will update you once the report is available.

We continue to lobby the government on COVID stimulus package improvements. If you have any COVID impact stories to share, please send them.

### Education Updates

CECA is working on converting our Electrical Project Supervision (EPS) and Construction Electrical Estimating (CEE) courses to online interactive. More information on what these courses include can be found on the CECA website.

If you have any questions, please send an email to gxwhitty@ceca.org or call me at 416-491-2414.

Respectfully yours,

Gregg Whitty

CECA Operations Manager
