SupplierLink Saskatchewan: Industry collaboration to Lead to Saskatchewan's first-ever automated vendor engagement system

SupplierLink Saskatchewan will be industry's first automated vendor engagement tool. It will showcase construction service providers' experience, capabilities, and qualifications, while connecting them to infrastructure owners who hire across industry by adding them to their bid lists. Developed by industry, for industry, with a focus on the Saskatchewan supplier base, SupplierLink Saskatchewan will broaden engagement with government and contractors of all sizes.

Once connected, buyers will be permitted to see detailed information about a company's qualifications. They will be able to find contractors by filtering the directory by things such as Saskatchewan presence, work scopes, skill sets, geographical areas of operation, and many other attributes. The system will even provide workforce demographics, safety certification, proof of insurance, bonding, and a way to catalogue project experience.

COR certification data is directly linked in SupplierLink, meaning contractors do not need to update their COR certification status and buyers do not need to verify anything. As well, other attributes like WCB clearance status are brought in automatically, making independent verification of data unnecessary. Enter it once, and the system auto-renews everything by itself.

All stakeholders have done an excellent job coming together and solving an age-old industry issue in a way that satisfies everyone's needs. Stay tuned for more news on the launch of SupplierLink Saskatchewan in the coming months!
