

The Saskatchewan Construction Safety Association (SCSA) is pleased to launch its essential training course for construction supervisors, **Leadership for Safety Excellence**, as an On Demand Training option. This new course is equivalent to the Instructor Led Training version that is regularly scheduled online or in SCSA classrooms, allowing learners to access the comprehensive course at a time and pace that suits their schedule.
The course is tailored for busy professionals who appreciate flexible, independent learning using digital tools.

Participants gain an understanding of applicable legislated responsibilities and how to perform supervisor safety tasks such as a hazard assessment, worksite inspection, incident investigation, workplace training and communication. Two new sections have been added to clarify Job Hazard Analysis and cover Safety Culture.
