

## NIH's April 5 Deadline is Near: Don't Get Caught without the Proper Registrations

The NIH advises that it can take **up to six weeks** to complete all of the registrations necessary to submit your SBIR/STTR proposal through Grants.gov to the NIH. If you haven't already completed this process for an April submission, you should start now.

*Be aware that there is now an additional requirement in the SAM registration process that requires a Notarized Letter. This can extend the registration process by days/weeks. Please take this into consideration and start the process as soon as possible.*

At this point we think we have seen almost every mistake that can be made in this process and have shared in many of our clients' stress and disappointment when at the last minute they find they are unable to submit their proposals. Don't underestimate the number of things that can go wrong. Start the process early and double check that it is complete!

We cannot stress highly enough how important it is to keep good track of your login and password details for all of these sites -- particularly Grants.gov and eRACommons. Losing or confusing these details can cause a great deal of distress when you are trying to submit your application. Of course, this stress is reduced if (as we encourage) you submit several days before the deadline!
