

Study Confirms Just Right Reader Accelerates Literacy Growth

An independent third-party study by LXD Research found that students using Just Right Reader's Science of Reading Take-Everywhere Literacy Packs™ made significantly greater literacy gains than peers using other decodable books after just five months of use.

Proven Results

LXD Research, an independent research organization, conducted a quasi-experimental study to evaluate the impact of Just Right Reader's [Take-Everywhere Literacy Packs™](#) on early reading development.

The study included 252 kindergarteners who used Just Right Reader materials and 177 students in a control group who received other or no decodable books. After just five months of use, students using Just Right Reader showed accelerated growth in foundational reading skills.

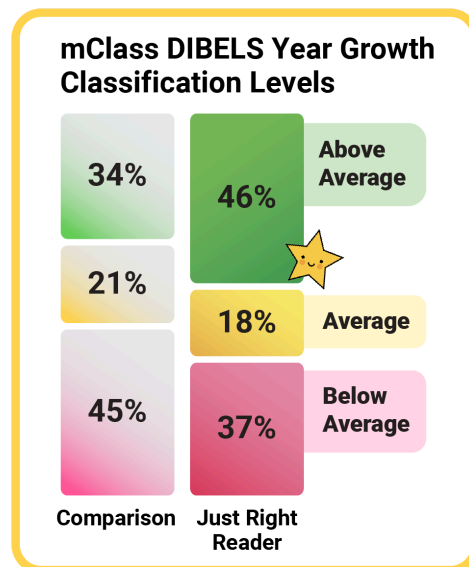

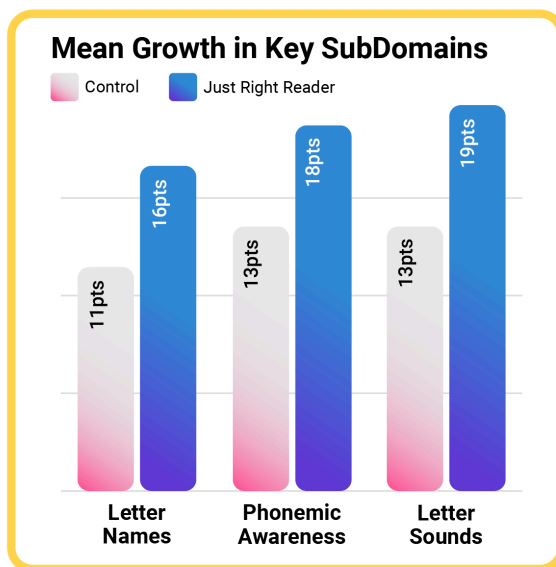

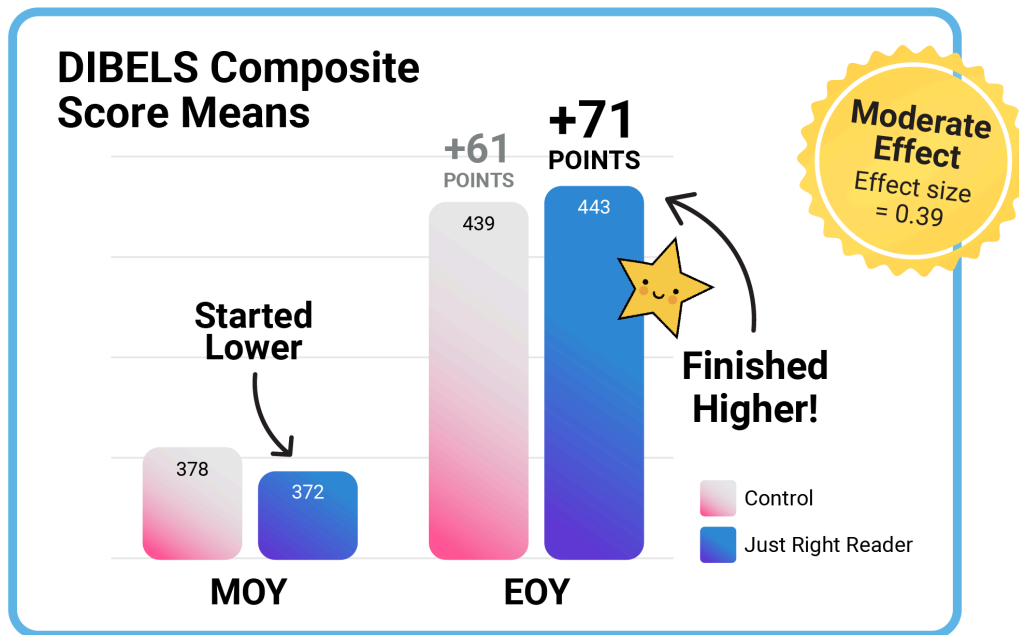

- ESSA Level 2: Moderate Evidence — meeting federal standards for evidence-based programs.
- Cohen's $d = 0.39$, representing a moderate, meaningful impact equivalent to more than three weeks of additional learning growth.
- $p < .001$, meaning the findings are statistically significant and highly reliable.

“Students who were low in reading had confidence that they were able to decode CVC words, and that made them excited for reading.”

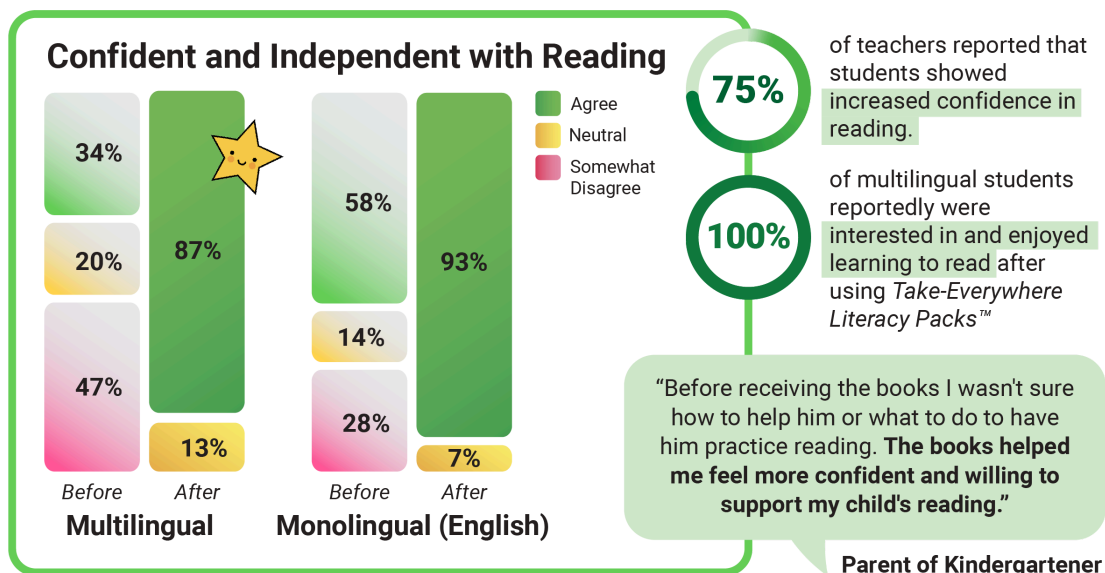

—Kindergarten teacher

Accelerated Reading Achievement in School, at Home, and Everywhere

Students using Just Right Reader's Take-Everywhere Literacy Packs™ demonstrated accelerated growth in early literacy skills in just five months.

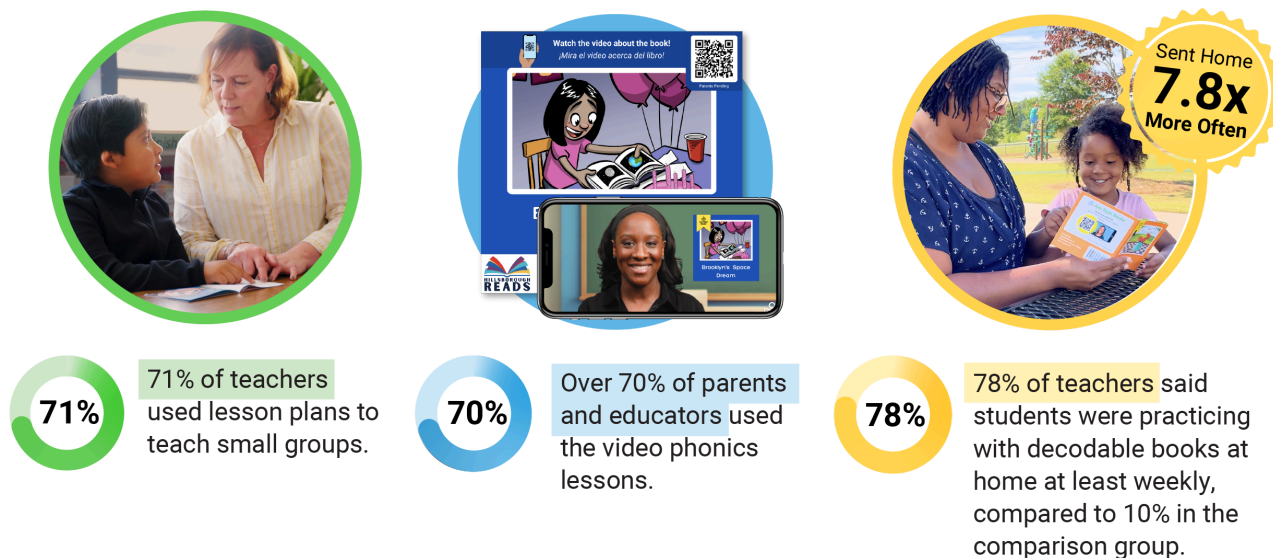

When students practice at school and at home, achievement accelerates. **In this study, students with Just Right Reader decodables took books home and practiced 7.5 times more often than those using other decodables.**

Empowering Families, Supporting Educators

The LXD research study revealed powerful connections between home and classroom learning, with strong engagement from both families and teachers.
