

Has your child been diagnosed with a genetic disorder that causes...

- Autism
- Intellectual disability
- Brain malformation
- Vision Loss
- Or any combination of the above?
- Epilepsy
- Movement disorder
- Challenging Behaviors
- Hearing Loss

We are interested in learning from parents and caregivers of individuals with genetically-caused developmental brain disorders (DBDs). You are invited to complete an online survey about the affected individual's symptoms and daily function.

The goals of this study are:

- Learn more about symptoms and every-day abilities of persons with DBDs
- Expand access to research through use of an internet-based survey
- Improve the survey's use across countries and cultures

The survey is anonymous and there is no cost to participate. If you live in the UK or the USA, there is also an optional phone interview to give us feedback.

Questions?

Contact the Principal Investigator (Heather Adams) at:

- email: DBDStudy@cardiff.ac.uk
- calling from UK: 07789 568 084 [secure messages can be left at this number]
- calling from USA: (585) 275-9330 [secure messages can be left at this number]
note, messages left at the USA number will be checked weekly
