Architect:	Owner:	Bid Project Status: Open to Bid
Project Description: Please accept or decline your intent to bid via this invitation. If you are unable to provide a bid, please let us know as soon as possible.		
PROJECT DESCRIPTION: This project consists of two one-story additions and one two-story addition, as well as renovations throughout an existing two-story middle school building in Fort Worth, Texas, consisting of an overall building of approximately 204,000 square feet. This project will consist of three separate building additions, each strategically incorporated on the site to have the best impact on the students in their daily educational experience. First building addition to the southwest will include the new administrative suite for the school. This area will serve as the new main entry to the campus and will be designed with a secure vestibule for checking in parents and guests. This design will allow for improved drop-off and pickup safety as well as better line of site visibility of vehicles and people entering and exiting the campus.		

Second, the campus will receive a classroom wing addition on the southeast corner of the building. This will contain both core classrooms and lab spaces in a 2-story classroom wing allowing an entire grade level to be contained within this area. This will allow the integration of 6th grade onto the campus in a controlled manner.

The third and final building addition is the incorporation of a new fine arts wing. This area will host programs such as Band, Choir, Orchestra, Theater, and Visual Arts spaces which will give all students the opportunity to pursue and grow in the areas that most interest them.

Structured slab on crawl space and slab-on-grade, steel frame. Roofing system is a 2-ply roofing system on structural steel deck, beams, joists, and columns. Please refer to drawings and project manual.
