

New York State Pollution Prevention Institute

The New York State Pollution Prevention Institute (NYSP2I) is searching for a Director to lead our statewide technology development, transfer, and assistance center whose mission is to make New York State more environmentally sustainable for businesses, workers, and the public through more efficient use of raw materials, energy and water, and reductions in toxic chemical use, emissions to the environment and waste generation. NYSP2I is an integrated program of several major elements: direct technical assistance to industry; research and development; outreach and education; a community grants program; and support of New York State's Small Business Environmental Assistance Program, climate action plan, and other initiatives. NYSP2I is led by Rochester Institute of Technology's (RIT) Golisano Institute for Sustainability (GIS) and is a partnership between RIT, Clarkson University, Rensselaer Polytechnic Institute, University at Binghamton, Cornell University's College of Agriculture and Life Sciences, and the New York State Manufacturing Extension Partnership.

The Director manages an annual budget of approximately \$4 million and leads a collaborative team of approximately 15 full-time staff. The Director leads and supports development of strategies and plans for NYSP2I, working closely with the NYS Department of Environmental Conservation to ensure alignment with NYS priorities. The Director stays abreast of the State's environmental challenges and opportunities, and explores solutions, potentially developing new programs and initiatives that lead to improved environmental outcomes for NYS. This work includes pursuing additional funding sources and developing proposals to grow and ensure continuity of NYSP2I. Another critical role of the Director is to establish and maintain relationships with NYSP2I partners, industry, government, non-government organizations and other important stakeholders. This entails travel throughout New York State to promote the Institute, encourage environmental stewardship, and engage with partners, stakeholders, and thought leaders on a regular basis.
