

Vision and Success at School

Every parent wants their child to be successful in school. But as many as 25 percent of children in any classroom have vision problems that keep them from attaining their highest level of success. Four of 5 classroom hours involve doing near vision work less than arm's length from a child's eyes. Many children and adults cannot handle such intense, prolonged near vision work.

Some children lose vision to nearsightedness; others avoid near vision work and do poorly at school. Some children struggle along, reading and re-reading passages to comprehend them, still others get headaches or score low on reading assignments.

Optometric research has proven many ways to deal with learning-related vision problems. Sometimes in simple, direct ways lenses help. In more complex cases, re-training the child to see efficiently will result in increased ability to comprehend.

Vision research has shown ways to prevent or reduce permanent vision loss to nearsightedness, and turn children who "hate" or avoid reading into content and interested readers.

If you have a child whose school problems fit the checklist below, or you know someone with such a child, you are invited to attend a special workshop on vision and learning at the time and place shown below. You'll be glad you attended.

Vision and learning checklist

- ☐ Short attention span for reading
- ☐ Must read and re-read material to understand it well
- ☐ Takes "hours" to do 30 minutes of homework
- ☐ Disturbs other children in class during reading or near work
- ☐ Gets sleepy when reading
- ☐ Still reverses words or letters beyond second grade
- ☐ Diagnosed/suspected ADD/ADHD/Dyslexia
- ☐ Skips or re-reads words or lines
- ☐ Covers one eye while reading or exhibits odd postures at desk

You are invited to attend a special vision workshop!

Tuesday, October 1st

6:30 PM

John P. Jacobi, OD, FCOVD
Suburban Eye Care, PC
32415 Five Mile Road
Livonia, MI 48154

RSVP 734-525-8170

For Inquiries, Contact:

Amanda Timbre, *Chief Vision Therapist*

In this hands-on workshop, you'll learn how to assess, test for and distinguish visual conditions that keep some children from doing well in school. You'll have an opportunity to practice tests on other participants, ask questions and meet with other parents and professionals.

This event is free and is approximately one hour long.
