TEC21 workshops in November will look at digital assessment strategies

Lutheran school educators participating in the TEC21 Workshop Program across our 35 LCMS districts will gather this month to learn how to evaluate student learning and success through a host of digital assessment tools and strategies. This is just one of the brisk topics TEC21 facilitators will cover this fall to equip our Lutheran classrooms with the brightest and best student- and teacher-centric technology solutions available to our schools.

If you missed our news updates last month, TEC21 has added English and science cohorts to its new high school lineup of theology and history cohorts. The STEM cohort will follow the ministry's traditional monthly workshop format beginning next fall.

It's not too early to look ahead. Registration for next fall's Season 16 opened October 1 and you can register here to hold seats – <https://tec21connect.com/registration/>. If you're already connected, plan to remain so by registering another teacher or two. If you're a previously unreached school in one of our 35 districts, this is your opportunity to get connected now.
