

## **ANNOUNCEMENTS**

### **AP AUTOMATION**

We are thrilled to announce that we've developed a partnership with AI SoftWorks, the makers of Trapeze for Invoice Processing, to bring automated invoice processing to ENet Docs. This partnership combines our existing publishing and workflow tools with the powerful T4IP invoice processing. Our new automation server bridges the gap between the two systems as well as communicates with your ERP to ensure smooth processing.

ENet Docs delivers a financial and tactical advantage by improving your payment processes, reducing expenses and maximizing efficiency. ENet Docs' powerful workflow manages the invoice validation and approval processes, while maintaining a fully searchable repository after the processing has been completed. When paired with AI Softworks T4IP, you will reduce the errors, time and expense of processing invoices. Intelligent data identification and classification can be used to link documents directly in your business system. Processed invoices are automatically moved to a process complete folder in ENet Docs for quick and easy retrieval.

### **ADDITIONAL NEW PRODUCT RELEASES**

We recently released our new Signature Capture Module for Counter Sale and customers are already reporting increased efficiency and money saved in branch locations. We will be releasing shortly our Signature Capture Module for Delivery Truck POD.
