

## Micro but Mighty

*Horner Automation Group releases industry leading, entry level all-in-one controller*

INDIANAPOLIS- Horner Automation Group has just unveiled their standard setting, entry level series of all-in-one control systems available with 2", 4", and 7" screens. Ideal for any simple application, the Micro OCS controllers can perform in multiple industries from water treatment, to food processing, to HVAC/Environmental control and many others. The Micro OCS controllers are one of the best deals on the market with all the function capabilities along with Horner's FREE companion programming software, Cscape. The line is a dream for manufacturers set in an affordable price range.

There are very few entry level products that support built-in Ethernet IP (on the X4 and X7) and even fewer that are coupled with an industry-leading 30 built-in I/O – including digital and analog. The web serving and programming capabilities of the Micro OCS series makes it very easy to retrofit into an existing system while adding modern capabilities to any machine.

The Micro OCS family incorporates a similar all-in-one construction as Horner's XL series but are best suited for applications that don't require the power of the XL line.

Horner APG, LLC (Advanced Product Group) comprises of Horner Automation Group and Horner Lighting Group. Horner APG LLC was created 30 years ago as a division of Horner Electric which started 70 years ago in Indianapolis, Indiana. Horner Automation Group designs, builds, and sells their own all-in-one controllers, consisting of programmable HMI, Control, I/O, and software for the automation market. A US-based company with products assembled locally, the reach of Horner is far from local, with locations all over the globe from Brazil to China.
