Walk-ins are also welcome.

TMC
TRUMAN MEDICAL CENTERS

"I was really afraid to get tested," says 54 year-old Lacey. "I had a career. I had a child. My husband and I talked about it and decided, 'let's get it done.' You can live in fear and not know what's going on in your body, or you can get answers. It turns out I had nothing to be afraid of. Through a screening at Truman Medical Centers, I tested positive. However, the treatment was actually no big deal, and now I am cured! I want everyone to know what an absolute no-brainer this decision is."

Hepatitis C is a potentially life-threatening disease caused by a virus that attacks the liver. Hepatitis C often has no symptoms until it reaches an advanced stage so you may not be aware that you actually have the disease.

The good news is that all it takes is a blood test to find out if you have Hepatitis C and according to the FDA most cases of Hepatitis C can be cured with a daily combination of pills over a period of just 12 weeks. If you were born between 1945 and 1965, you should be tested.
