

Savannah Gentry

I'm a PhD Candidate in the Pringle Laboratory at UW-Madison and have spent my time trying to unravel host specificity of fungal pathogens and pathogen physiology with *Ophidiomyces ophiodiicola* and *Nannizziopsis guarroi* in reptiles. During my PhD, I have also dedicated my time to community engaged scholarship as a mentor and as a resource for non-profits both as a grant writer and a mycologist. I'm a lifelong and professional artist of traditional ink and digital media. For the near future, my goal is to apply to post-docs in industry and effectively transition out of academia while continuing to pursue my joy for mycology and community engagement.
