

Open Notes in Sweden

Past, Present, Future

UPPSALA
UNIVERSITET

Maria Hagglund, PhD

Uppsala MedTech Science & Innovation Centre

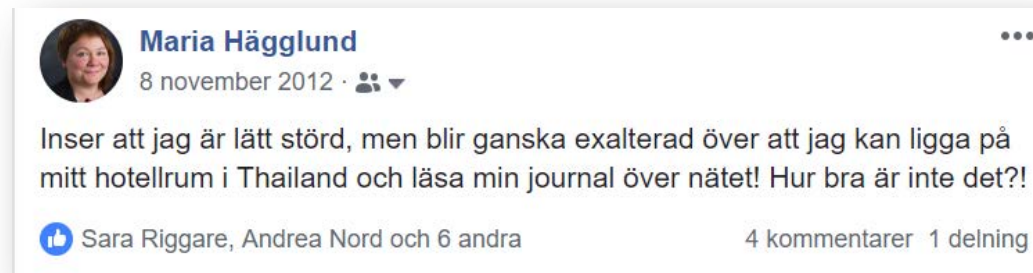

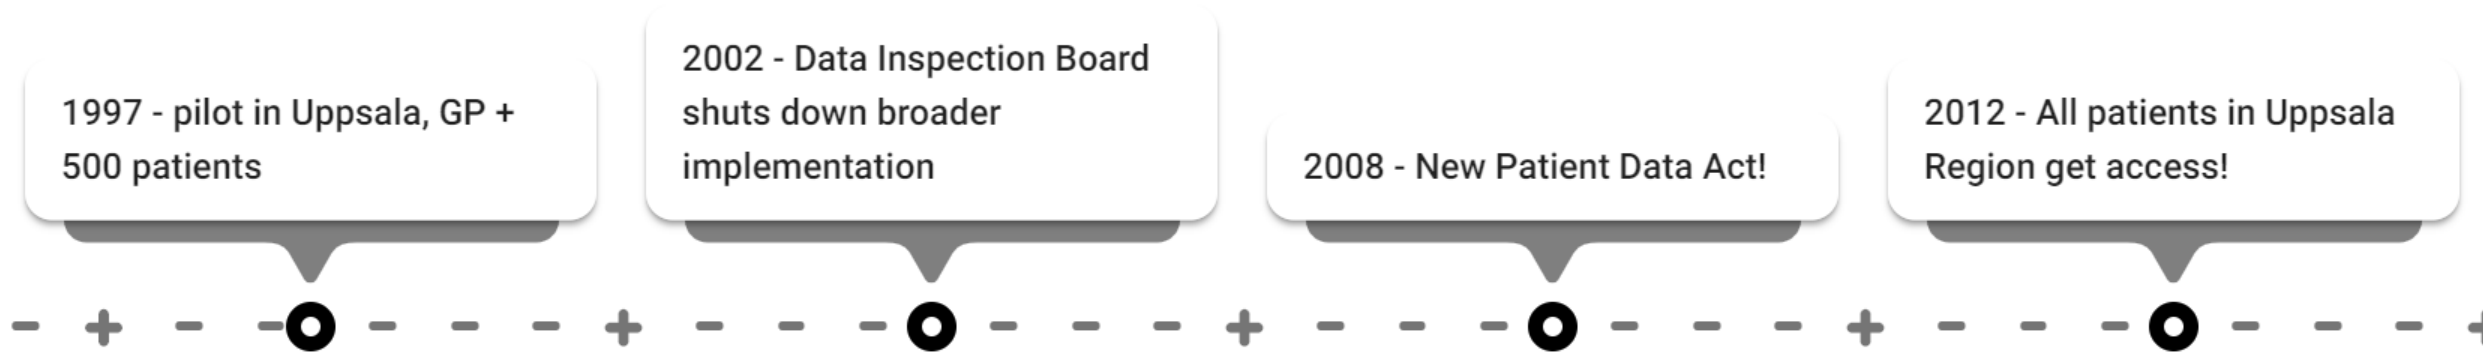

The Swedish Context

- Independent regions responsible for healthcare
 - Private care providers – tax funded
- Electronic Health Records used throughout healthcare
 - both primary care and hospitals
 - Different EHR systems used
- High Internet access and usage (almost 100%) among the population
 - 56% of people over 76 year use Internet
 - eID used for most communication with government organisations (e.g. tax returns, parental leave)
 - National patient portal (1177.se)

Population: 10 million
290 municipalities
20 regions

How did note sharing develop in Sweden?

How did note sharing develop in Sweden?

2014 - the local Uppsala solution is moved to a National Health Information Exchange platform.

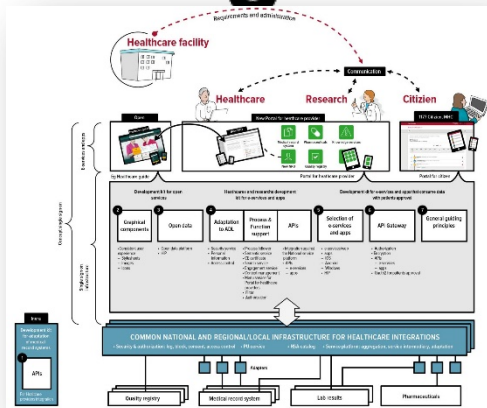

V.1 of the National Regulatory Framework (plenty of room for healthcare providers to choose what to share and when)

2015 - 6 more regions connect and start sharing notes

2016 - v.2 of National Regulatory Framework

All patients should have immediate online access to all documentation in tax-funded healthcare (including dental care). Few exceptions.

2018 - last of Sweden's 21 regions start sharing notes.

Patientens noteringar

Här kan du göra en egen notering. T.ex. om du vill följa upp något vid nästa besök. Du bestämmer själv om...

Patient's Notes

2. Vill även som ska kunna se den

Tänk på att om du gör en notering syns för vårdpersonal för den tillgång för alla som läser journalanteckningen. (Du kan ändra detta i inställningarna genom att öppna noteringen för ändring, välja det andra alternativet och spara ändringen.)

- ☒ Bara jag ska kunna se noteringen
- ☐ Låt även vårdpersonal se noteringen

Spara notering Autoryt

Current status of note sharing in Sweden

The screenshot shows the 1177.se website for Uppsala County. The browser's address bar displays '1177.se/Uppsala-lan/'. The top navigation bar includes the 1177 Vårdguiden logo, the Region Uppsala logo, a 'Välj region' dropdown menu, and icons for 'Logga in', 'Lyssna', 'Hitta vård', and 'Sök'. Below this is a horizontal menu with links: 'Liv & hälsa', 'Barn & gravid', 'Olyckor & skador', 'Sjukdomar & besvär', 'Behandling & hjälpmedel', and 'Så fungerar vården'. The main content area features a large image of a man and a young girl on the left. To the right of the image is a headline in red: 'Covid-19 - Så kan vi hjälpas åt att skydda varandra'. Below the headline is a paragraph of text: 'Stanna hemma när du är sjuk och sedan två dagar till. Det gäller även om du bara har lindriga symtom, som en lätt förkylning. Har du symtom kan du boka tid för provtagning och få svar om du har covid-19'. At the bottom of the article are two blue buttons with white text: 'BOKA TID FÖR PROVTAGNING FÖR COVID-19' and 'LÄS MER HÄR OM COVID-19 - CORONAVIRUS'.

Kontaktersak

Smärta under höger häl.

Anamnes

Aktuellt hälsoproblem:

I mars då hon åkte vattenrutschbana med lille sonen i famnen drömde hon i höger häl mot bassänggolvet då hon landade. Hade rejält ont under hälen till att börja med, linkade en del men successivt blivit bättre men aldrig riktigt bra. Kan promenera men det gör ont. Då hon nu sista veckorna har börjat träna spinning har hon fått rejält ont under hälen, mest på mediala sidan av hälen men sprider sig ibland även ut längs lateralsidan av höger fot.

Status

Allmäntillstånd:

Opåverkad, överviktig. Går utan hälta.

Lokalstatus:

Båda fötterna inspekteras och palperas utan något avvikande.

Bedömning

Bedömning hälsoproblem:

Hälsmärta efter trauma. Röntgen drop-in. Om normal röntgen samtalar vi om anpassade skor via ortopedtekniker.

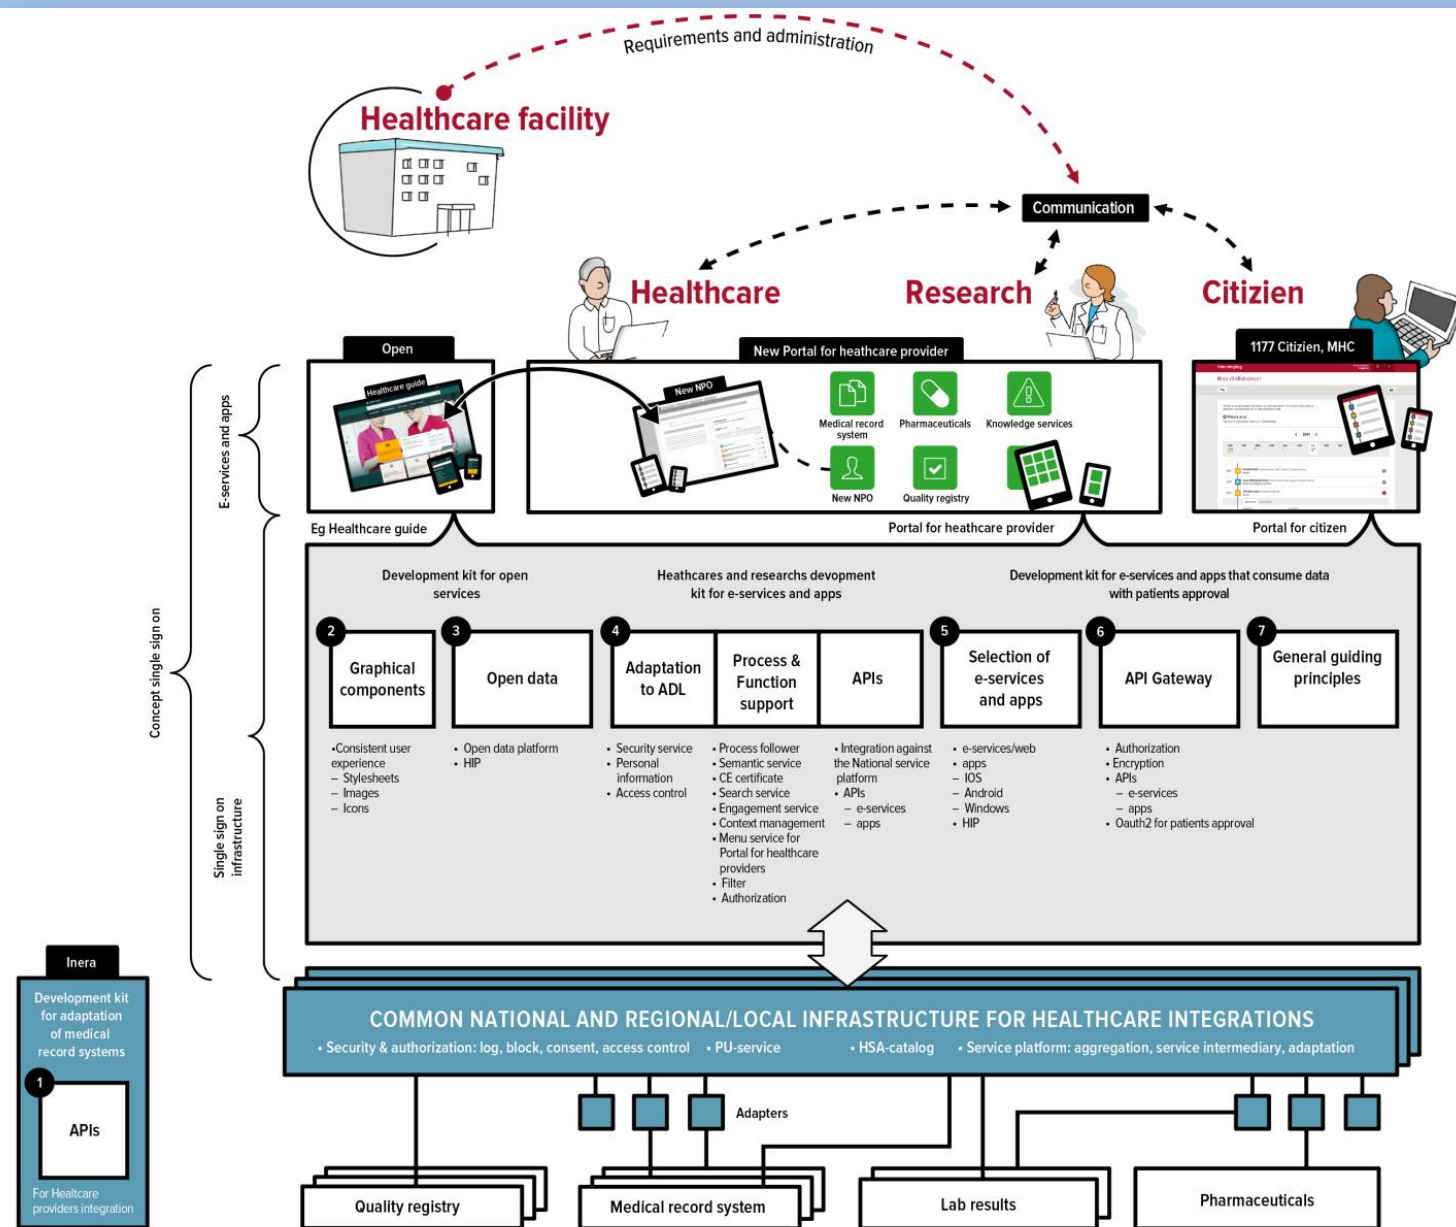

Diagnos:

Diagnos finns registrerad i anteckningen. Uppgifterna visas i diagnoslistan.

Patientens noteringar

Smärtan är nästan helt försvunnen nu, jag kan t o m ha klackskor igen :)

University Health Network, Toronto

Health Care in Canada

- Publicly funded -- universal coverage for medically necessary health care services provided on the basis of need, rather than the ability to pay.¹
 - Provincial/territorial governments have most of the responsibility for delivery of health and social services.
 - Federal government responsible for some delivery of services for certain groups of people.
- 85% of family practice physicians, and 79% of specialist physicians report using an electronic medical record.²
 - 22% of Canadians can access portions of their medical records electronically.³

Population: 37,971,020
13 provinces and territories

94% of Canadians have home Internet access⁴
71% of seniors report Internet use

¹ Government of Canada, 2020

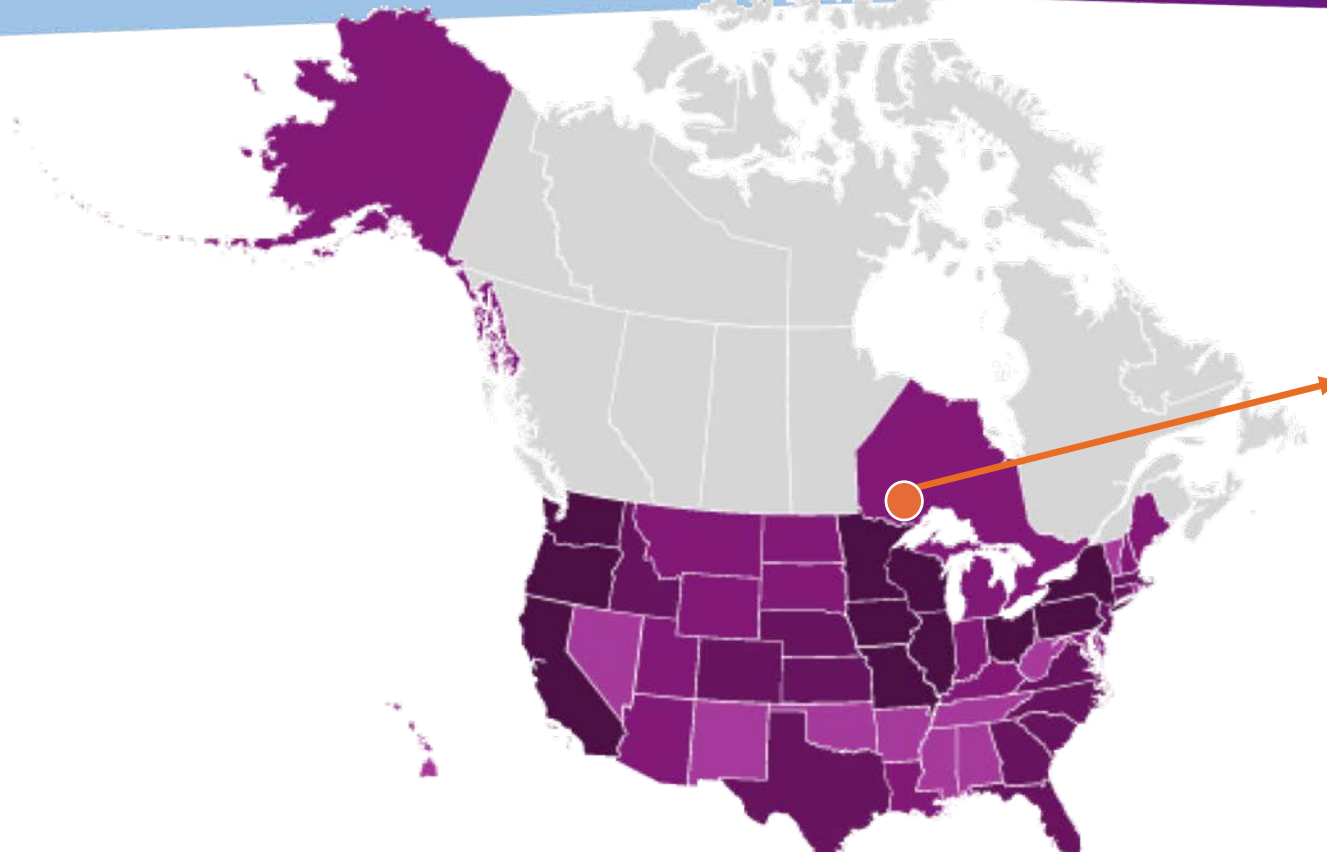

² Leaver, C. Use of electronic medical records among Canadian physicians, 2017

³ Canada Health Infoway. Connecting patients for better health, 2018

⁴ Statistics Canada. Canadian Internet Use Survey, 2019

Initial Concerns

What clinicians think

- It would be difficult for the patient to receive news about their results online without proper support. Release of sensitive results and reports should be delayed.
- Notes from clinicians may not be appropriate for patients to view since they are used as a communication tool between clinicians.
- The relationship between the patient and healthcare provider will change. There will be an increase of calls by the patients to their healthcare providers.

What patients think

- Having information contributes to being informed, and decreases the anxiety and mental stress of waiting. This allows us to be better prepared for appointments and focus on other topics related to care rather than results.
- Having access to clinic notes is useful. It is an opportunity to clarify and confirm the patient's understanding and interpretation of the visit, to get information corrected, or to act as an information safety net.
- Access will help improve communication. Patients will be informed about their health and will take more responsibility to share more context regarding their health.

Your Medical Record

“The patient is entitled, upon request, to inspect and copy all information in the patient's medical file which the physician considered in administering advice or treatment.”

McInerney vs MacDonald
Canadian Supreme Court Ruling (1992)

Results

- Hematology (e.g. bloodwork)
- Pathology (e.g. tissues)
- Chemistry (e.g. bodily fluids)
- Microbiology (e.g. organisms)

Notes

- Doctor/clinic notes
- Letters
- Discharge summaries

Visit Summaries

Reports

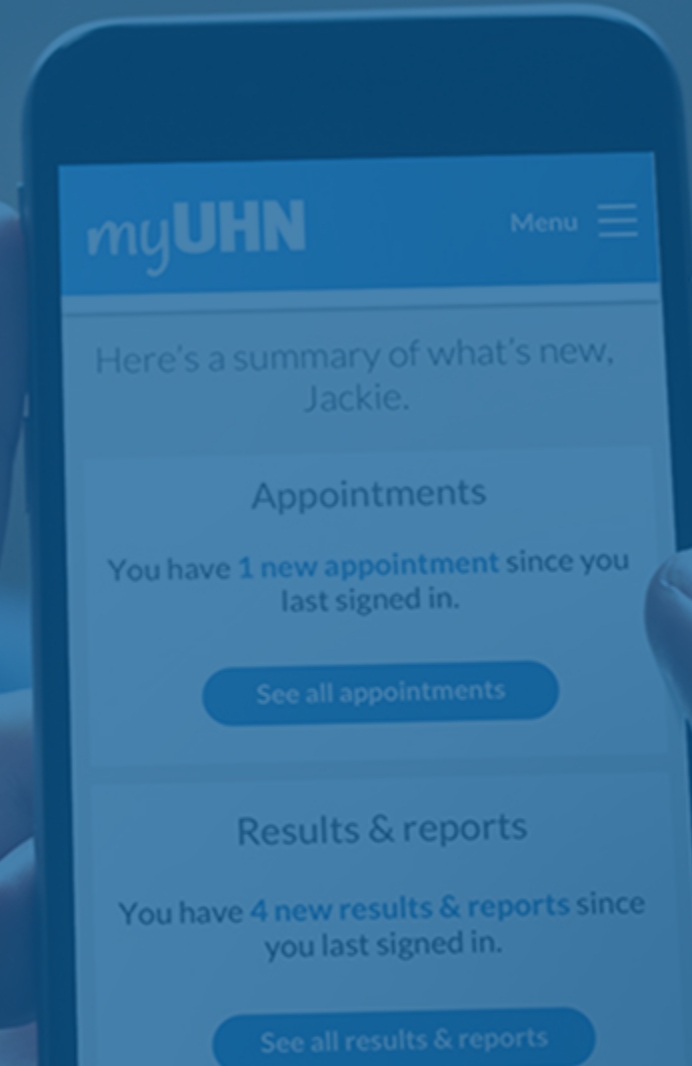

- Diagnostic Imaging textual reports (e.g. CT, MRI, X-ray)

Diagnostic Images

The Needs of Patients Come First

- UHN appointment schedules and reminders
- Real-time access to UHN medical record (lab results, reports, notes)
- Links to patient education resources
- Share health record with others
- Access to Ontario Lab results (including COVID-19 results) from >150 healthcare organizations, community and public health labs (August 2020)

No significant impact on Princess Margaret Cancer Centre triage call volumes for majority of sites

Anecdotal feedback that calls about results to physicians and their offices increased (data not available)

94% of Patients Prefer Real-Time Access

“I prefer to have my results right away even if they may be worrisome because I have a right to the information. I find it more worrisome to not have the information. And when I do feel worried about my ability to interpret the results or when I don't want to know until I consult my health care team, I simply don't look.”

Real-Time Release

- Patients access their information as it becomes “final” and available in the hospital’s electronic record, at the same time it becomes available to the patient’s care team.
- Blocking patient access to their data is by exception only, based on legal and/or bioethical reasons (e.g. risk of serious harm to treatment or recovery of patient, risk of serious bodily harm to another person, etc.). Reason must be documented in the Health Information System and is audited on a monthly basis.

Advice From Colleagues

1. Explain to the patient what and why specific tests are being ordered, and prepare the patient for possible test outcomes. Provide information about what to expect next.
2. Accuracy of documentation is key. Double-check accuracy of residents, fellows or medical students who dictate on the physician's behalf to reduce need to correct notes due to inaccuracy in dictation.
3. Be sensitive to the patient, but do not omit or avoid important information that is relevant to their care.

Use factual, objective and descriptive statements.

Don't include bias, blame, value judgments and discriminatory comments.

If you think a patient may become anxious, advise them to look at their results during or after their visit to review results together, or to remember what was said at the appointment.

A person is shown from the chest down, holding a small green plant with dark soil in their cupped hands. The person is wearing a light-colored, patterned top. The entire image is overlaid with a semi-transparent blue filter. The text is centered over the image.

Building a new paradigm of trust through patient immediate access to all of their medical records will empower patients like never before and improve the patient-provider relationship.

There is no going back.
