

Biological Sciences e-Notes

For the week of July 3, 2025

Vol. 14, issue 25

The Evolutionary Quantitative Genetics Workshop 2025 was held at Mountain Lake Biological Station from June 8th through June 14th. The workshop covered a range of topics from evolutionary quantitative genetics to phylogenetic comparative methods of trait evolution and was led by **Josef Uyeda** and former VT postdoc **Fabio Machado** (now faculty member at Oklahoma State U.) and five co-instructors: **Pat Carter** (Washington State U.), **Jacqueline Sztepanacz** (U. of Toronto), **Laura Alencar** (Yale), **Joe Felsenstein** (U. of Washington, Virtual), and **Joel McGlothlin** (VT BioSci).

Twenty participants joined the week-long workshop from 16 institutions across 5 different countries, including VT BioSci graduate students **Eliza Tarimo** and **Benedicta Ottairoegbu**. Previous versions of the workshop were held annually from 2011-2019 and virtually in 2021 and 2022. This is the first version of the workshop under VT leadership and the first at MLBS. More information about the workshop is available at: <https://eqgw.github.io/>
