Hybrid & EV Systems: Diagnosis & Repair

Ready to step into the world of hybrid & EV vehicle repair, but not sure where to start? In this course, learn the essentials for working on vehicles that combine ICE and EV technologies with a focus on fundamentals, common problems and safety. With more hybrids and EVs hitting the road every year, this class is the ideal place to start to expand your service capabilities.

What you will learn:
- Master fundamentals of hybrids and EVs, including components, systems and safety
- DVOM usage (CAT III certified) using MegOhm and MicroOhm meters
- Diagnose using scan tools, lab scopes and amp clamps
- Test high voltage batteries, inverters and converters, regenerative braking systems, and EPS
- Common service procedures; oil changes, cooling systems, tires, brakes and HV testing
