How Big Was Noah's Ark?

The ark was the size of one and a half football fields. So that means 180 yards. The Bible tell us the ark was 300 cubits long, 50 cubits wide and 30 cubits high. Cubits were the length of a man's elbow to the tip of his middle finger. Take some string or yarn outside and measure 180 yards to see the size of the ark. The ark was a sanctuary for all living things during the flood.

There were two of each animal and living creature on the ark. How many things can you think of that go together in pairs- ex. Salt and pepper,

socks, etc. Make a list and add to it all week.

Outreach Ideas- Find an animal shelter and drop off some needed items to them. Make a rainbow craft or item from the cooking activity to someone special to show you care!
