

PLANETARY HEALTH IS HUMAN HEALTH

Sandra Staveski PhD, RN, CPNP-AC/PC, CNS, FAAN

Currently there is a gap in nurses understanding of the planetary health crisis that is upon us. Human health and the health of the biosphere are inextricably linked and interactive system. Earth's life-support systems, including freshwater, oceans, land, biodiversity, atmosphere, and climate, are linked with human health. At the same time, human activities are adversely affecting natural systems. This talk plans to provide an overview of the planetary crisis and human health crises upon us through a review of the current literature and ways we all can be more sustainable.
