

Blended Learning Apps That Can Make You Flip!

Web Scan Editor's Note: We are delighted to have a guest Web Scan column writer for this issue, Rebecca Metzger. Rebecca holds Master Degrees in Special Education and Counseling, and currently is the West Virginia Adult Basic Education Coordinator for Distance Education and Professional Development at RESA 3 in Dunbar, West Virginia.
– Dr. David J. Rosen, Web Scan Editor

Blended learning has become more popular in adult education because hybrid classes with online and classroom-based instruction can increase student engagement and learning. Many apps are available for teachers to create screencasts (digital recordings of screens with voice-over narration to demonstrate skills and concepts) and to share those screencasts on learning management systems. Here are five free or inexpensive apps to create a flipped classroom; where students can access instruction online at home, and then class time is reserved for teacher help, activities, and projects.

1. Educreations

www.educreations.com

Educreations permits teachers to use an iPad to record lessons and tutorials on a whiteboard at no cost. Text or images can be imported from Dropbox or Google Drive and annotated. Videos can be shared through email, Twitter, or Facebook. In addition to creating lessons for students, users can access lessons created

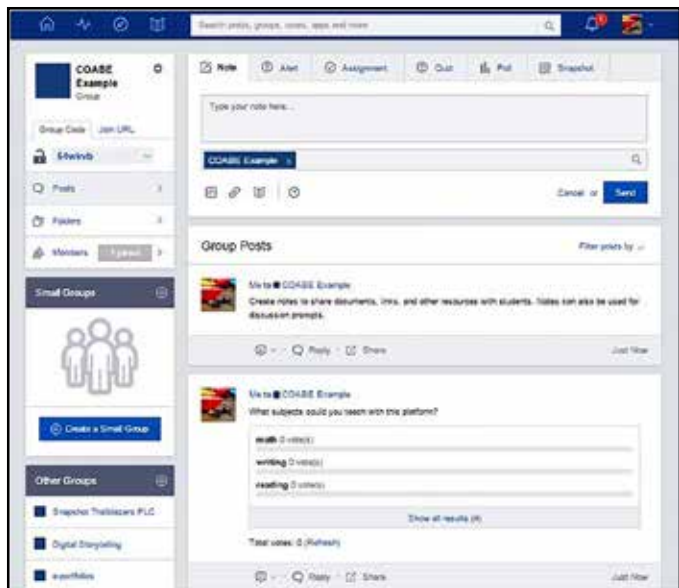

by others in math, science, social studies, English, world languages, and the arts. Educreations can be used on a personal computer or Apple devices.

2. Edmodo

www.edmodo.com

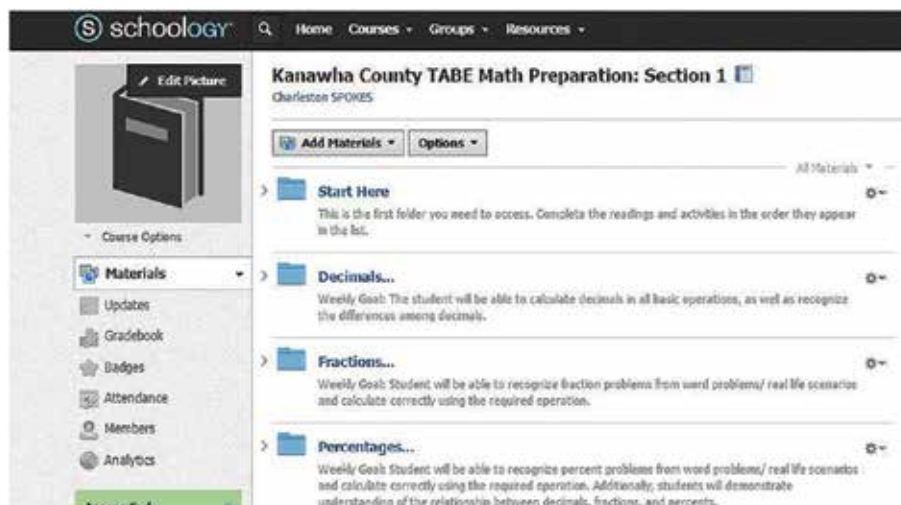

Edmodo is a free social learning platform where teachers can create groups and subgroups to assign content, share schedules, create quizzes, and conduct polls in just a few steps. Teachers can initiate student discussions and collaborations with posts. Edmodo Snapshots allow teachers to create math or English Language Arts quizzes from a test bank of over 1,000 questions aligned to Common Core State Standards (CCSS). The Snapshots provide quick assessment data to determine student progress, and links to free online resources to reteach missed standards. Teachers can acknowledge achievement with custom badges. Edmodo is accessible with a personal computer and Apple, Android, and Windows devices.

3. Schoology

www.schoology.com

Schoology (pronounced skoo-luh-gee) is a free learning management system that permits teachers to easily create online courses and share content between instructors. Materials can be imported from DropBox, Evernote, Khan Academy, and Google Drive. Content, quizzes, and rubrics can be aligned to CCSS. Discussions promote collaboration, and digital online badges reward academic progress and student behavior. Schoology is available on Android, Apple iPad/iPhone, Kindle Fire, and personal computers.

4. Explain Everything

www.morriscooke.com

Explain Everything provides a white screen where lessons can be created. Active web browser windows and multiple file types can be imported into screencasts. Dropbox, Evernote, and Google Drive are a few of the many cloud storage choices for exporting and sharing videos. Project files can be compressed on a Mac with the Explain Everything Compressor, and the Explain Everything Player allows projects to be played on a Mac. The app is \$2.99 for Apple, Android, and Windows devices.

5. Show Me

www.showme.com

ShowMe permits users to create tutorials with a recordable white screen on their iPads, where files can be uploaded from the photo library, Google Drive, or Dropbox. The user annotates the images with voice and pen features. Videos created by others can be accessed via the app or on a personal computer. ShowMe is a free app on Apple devices.
