The stress of the COVID-19 pandemic may have you feeling like you want to increase your physical activity. You may be wondering how to stay safe, physically distant, and active during a pandemic. Follow these five tips to start a successful exercise plan.

- 1. **Find your motivation**. Why is starting an exercise plan important to you? Being active can help you:
  - Reduce blood pressure<sup>1</sup>
  - Maintain a healthy weight<sup>1</sup>
  - Manage stress<sup>1</sup>
  - Reduce risk for diseases like heart disease and diabetes<sup>2</sup>
  - Improve sleep<sup>2</sup>
  - Fight off infection<sup>3,4</sup>

Choose a reason that resonates with you and write it down.

- **2. Pick an activity.** Choose an activity you enjoy or have been curious about. Here are some ideas for exercising during the pandemic.
  - Try to get active in your home or neighborhood<sup>3</sup>.
  - Spend time outside biking, hiking, walking, or running. If exercising outdoors, maintain 6 feet away from others<sup>6</sup>.
  - Walking is a simple and affordable way to stay active<sup>7</sup>. To keep yourself and others safe, walk only with members of your household<sup>8</sup>.

- Get active during family time. Follow a workout video together, enjoy a dance party, design an obstacle course, or play an active game<sup>6,8</sup>.
- Use heavy food cans and/or bottles of laundry detergent as weights<sup>8</sup>.
- Try bodyweight exercises, like push-ups, squats, and lunges<sup>8</sup>.
- 3. Set your activity goal. Most adults should aim for 30 minutes of moderate-intensity aerobic exercise (like walking) 5 days per week<sup>1</sup>. Resistance training 2 days per week improves strength and bone health<sup>1</sup>. Shorter bouts of activity can also improve health, so focus on what is reasonable for you<sup>9</sup>. Start small and work up to the recommendations over time. Make sure your goal is SMART: Specific to the activity you want to increase, Measurable, Action-oriented, Realistic for your life, and Time-bound. For example, instead of, "Walk more," try, "For the next month, I will walk 3 days per week for 30 minutes."
- **4. Identify barriers and create a plan to overcome them.** Brainstorm things that might make your goal difficult to achieve. For each challenge, think of 1-2 actions that would be helpful. For example, if you set a goal to ride your bike to work 3 days per week, a challenge might be rainy weather. To overcome that barrier, commit to a 30-minute workout video online instead of a bike ride on rainy days. Write down your SMART goal and the actions you will take to overcome barriers. Hang them where you will see them every day.
- **5. Stay accountable.** This is the last step to creating your activity routine. Stay focused on your goal by tracking progress in a journal or smartphone app<sup>5</sup>. Encourage a friend or family member to get active with you<sup>5</sup>. Physically distance with an exercise buddy by working out over video chat or talking on the phone while walking<sup>8</sup>.

Now that you have identified your motivation, picked an activity, set a goal, and created a plan to overcome barriers and stay accountable, you are ready to get moving!
