The Landscape Tour at the Jones Beach Energy & Nature Center offers an immersive experience that explores the intersection of energy, ecology, and sustainable design in a unique coastal setting. The Center itself, a striking net-zero building set against restored dune landscapes, serves as both a museum and an ecological classroom. Built on the footprint of a former 1960s bathhouse surrounded by native vegetation, it demonstrates how human structures can coexist with natural systems. Outside, the grounds feature pollinator gardens, interpretive signage, and observation points that engage visitors with the barrier island's ecosystem. Overall, the tour offers a seamless blend of architecture, renewable energy, and environmental education, making it a thoughtful and inspiring exploration of coastal resilience and sustainability.
