What's New in Imaging

New PET/CT Service Line

Now Scheduling at Camden Clark Medical Center

IMG12064 - PET CT AMYLOID BRAIN SCAN

We are now performing PET/CT scans for early signs of mental decline. There are no required preparations for these exams. Upon arrival, the patient will receive an injection of a radioactive isotope and then "rest" here in the Imaging Department for 45 minutes to 1 hour before going onto the table for a quick 20-minute scan. These patients must be able to follow direction to hold still for the exam. These exams will be read by our board certified Neuroradiologist with results sent within 24 hours.

Please contact Camden Clark Radiology at 304-424-2315 with any questions!
