ASHRAE STANDARD 188

Legionellosis: Risk Management for Building Water Systems

ProAsys is pleased to offer our partnership in assisting building owners/managers adhere to the guideline set forth in ASHRAE Standard 188 which establishes minimum legionella risk management requirements for building water systems.

The ASHRAE guideline applies to buildings with one or more of the following types of systems:

- Cooling Towers/Evaporative Condensers
- Whirlpool Spas
- Decorative Fountains
- Misters, Atomizers, Air Washers, Humidifiers or other devices that release droplets of water

--- OR ---

Potable (Domestic) water systems for:

- Multiple Housing Units with Centralized Hot Water
- More than Ten Stories
- Housing for Occupants of the age of 65
- Patients Staying Longer than 24 Hours
- An Area Housing or Treating People with Certain Health Factors

Water Management Program Requirements

The Water Management Program outlined in ASHRAE Standard 188 must include:

- List of Team Members
- Brief Description of Water Systems (including flow diagrams)
- Hazard Analysis
- Hazard Control Method
- Verification of Control
- Validation & Documentation
