Weekly Influenza Surveillance Summary

WEEK 10: March 03- March 09, 2019

March 15, 2019

Overview

Influenza surveillance for Kane County Health Department includes the collection of data from hospital emergency rooms, laboratories, and public schools. Our participants have reported the following aggregate measures:

- Among five reporting hospital emergency rooms, 6.9% of visits were for influenza-like illness (ILI).¹
- During Week 10, 5 labs reported that 190 of 708 (26.8%) specimens tested for influenza were positive.² Of these 190 specimens:
 - 175 (92.1%) were positive for Influenza A
 - 15 (7.9%) were positive for Influenza B

No other specimen tested positive for the week ending on March 09, 2019.

- The ILI absenteeism rate for public schools in Kane County was 0.40%. No public school was closed due to increased ILI activity.
- As of the week ending March 09, there were 20 influenza-related ICU admissions reported to the health department. One influenza-associated pediatric death has been reported.
- To date, 4 outbreaks of influenza have been reported in Long-Term Care/Assisted Living facilities in Kane County.

¹Influenza-like illness (ILI) is defined as fever > 100°F with cough or sore throat without other known cause

²Rapid influenza testing cannot distinguish influenza infections caused by novel influenza A viruses. The sensitivity of this type of testing has been shown to range between 20-100% for seasonal influenza viruses. A negative result does not exclude influenza virus infection.

*All data are provisional

Emergency Room Visits

During Week 10, 6.9% of reported hospital emergency room visits were for influenza-like illness (ILI).¹

Each week, data for the 2018-19 season will be presented with data from the previous flu seasons to show the trend of ER visits for ILI over time.

Visits for influenza-like illness to reporting emergency rooms during Week 6 had the following age distribution:

- 0-4 years: 21.7% of all ILI visits
- 5-24 years: 33.0% of all ILI visits
- 25-64 years: 34.6% of all ILI visits
- 65+ years: 10.7% of all ILI visits

Throughout the season, KCHD will provide updated information on the total number of people visiting the emergency room for ILI, and what age groups make up those visits.

¹Influenza-like illness (ILI) is defined as fever > 100°F with cough or sore throat without other known cause

*All data are provisional

Reporting Schools: N=85

Influenza-like illness (ILI) is defined as fever > 100°F with cough or sore throat without other known cause

*All data are provisional

A Weekly Influenza Surveillance Report Prepared by the Influenza Division

Weekly Influenza Activity Estimates Reported by State and Territorial Epidemiologists*

Week Ending Mar 09, 2019 - Week 10

No Activity: No laboratory-confirmed cases of influenza and no reported increase in the number of cases of ILI.

Sporadic: Small numbers of laboratory-confirmed influenza cases or a single laboratory-confirmed influenza outbreak has been reported, but there is no increase in cases of ILI.

Local: Outbreaks of influenza or increases in ILI cases and recent laboratory-confirmed influenza in a single region of the state.

Regional: Outbreaks of influenza or increases in ILI and recent laboratory confirmed influenza in at least two but less than half the regions of the state with recent laboratory evidence of influenza in those regions.

Widespread: Outbreaks of influenza or increases in ILI cases and recent laboratory-confirmed influenza in at least half the regions of the state with recent laboratory evidence of influenza in the state.
