

**June 2020**

### **Meet the MRV Hub Network**

**Wiley Barbour** has been involved with the Greenhouse Gas Management Institute since its founding and currently serves as a Senior Project Director and Software Evaluator.

Wiley has worked in a number of different roles over his 30 years of experience in government, nonprofit and private sector, providing technical and policy support to corporations, government agencies, and nonprofits on issues related to air pollution, GHG emissions, corporate climate change strategy, offset project development, and sustainability analysis.

With a background as a licensed professional environmental engineer with a focus on air quality, Wiley is expert in emission inventory development for local air pollutants as well as GHGs and has led development of emission inventories at all different scales, including global, national, regional, state, city, corporate, and project level. Wiley has spent a lot of time as an auditor and third party verifier, often in conjunction with the operation of environmental markets where such activities are key to ensuring quality and fungibility of offsets. About his current work he says "serving as the Project Director for the Caribbean Cooperative MRV Hub is the most challenging and fulfilling job I have ever had; I love working with and for the people in the Caribbean and together we are building a sustainable institution that will benefit the region and serve as a model for other parts of the World as well."
