- A unique fun fact about you
 - I love Young Adult Fantasy Fiction.
- What I got out of the program
 - This program has opened my eyes to all the possibilities and diverse opportunities that the Clinical Research industry has to offer. Through its carefully curated curriculum, I was able to secure a position that afforded me the opportunity to showcase my skills and apply the knowledge gained while in the program.
- A favorite project or collective memory from your study tenure
 - When I entered the program as an online student I had an aversion for group projects but during my time in the program I began to like them. These group projects gave me an opportunity to work with my classmates, learn from them and develop my team building and leadership skills.
- How the skills I learned in the program benefit in my daily professional activities
 - All of the group projects, exams and classroom discussions have helped me develop as a clinical research professional. In my current role, I am called upon often to assist with planning meeting agendas, reviewing and revising reports, and presentations. At the present time I have 7 projects that I am responsible for and I can honestly say that because I have attended this program I am 100% confident that I can excel in my duties.
- Ease of enrollment or transitioning to graduate school at Plymouth
 - Prior to enrolling into this program I had completed an MBA program in 2012, therefore I wasn't too concerned about me settling into the role as a graduate student.
- Professional Association or Student Group involvement/other networking including ongoing relationships with colleagues and faculty to keep learning and growing in the profession?
 - While in the program I attended several Emerging Network of Clinical, Quality, and Regulatory (ENCQR) events, I am currently preparing to sit for the Certified Clinical Research Professionals (CCRP®s) exam hosted by The Society of Clinical Research Associates (SOCRA). I am also an active member in Black Women in Clinical Research (BWICR)-member and mentor, Minorities in Clinical Research (MICR)-member, and Latinos in Clinical Research-member.
