Course Instructor

- ACR 622 – Lifecycle of the Clinical Product
- ACR 632 – Clinical Study Operations and Execution
- ACR 634 – Clinical Risk Management and Safety
- ACR 695 – Clinical Research Career Exploration

Why do you like teaching in the ACR graduate program?

I love that all students come with an inquisitive mind and genuinely want to understand not just what we do, but why we are doing it.

Why would you recommend this program to a developing clinical research professional?

This program gives you the opportunity to learn about multiple aspects of clinical research and better understand all of the opportunities available in the field.

What is the most unique component of the Applied Clinical Research graduate program?

The instructors all have deep real-world experience in the application of the skills they are teaching. They have learned from their successes and their mistakes. This enables them to bring a much different perspective from someone who has never worked in the field.
