

Vein Finders

We offer 4 different vein finders. One will meet the needs in your office.

[V-Show](#) is the 3rd generation of vein image technology. It works by using near-infrared light, which is absorbed more by blood hemoglobin than by surrounding tissues. This contrast allows the system to create a real-time image of the veins beneath the skin.

Next Generation Vein Finder

[VS500](#) is the latest model of VeinSight™ and it's the winner of the Germany Red Dot Design Award. It not only has an elegant design, it also has amazing technology built inside. The VS500 is one of the most advanced vein finders in the international market. It has three features not found in other brands, Vein Center Line, Saving Vein Image and Distance Indication.

Best Vein Finder

[VS400](#) is a VeinSight™ product, which is handheld and lightweight, allowing clinicians to verify vein patency and avoid valves or bifurcations and easily converts to hands-free with the use of optional wheeled or fixed stands.

[Demo Video](#)

Better Vein Finder

[VS30](#) is a VeinSight™ Vein Viewer that projects near-infrared light with no radiation. The near-infrared light is absorbed by the blood, but reflected by the surrounding tissue to present a clear image of a patient's vein pattern.
