

VENIOONE AND DSi PARTNER TO OFFER UNIQUE EARLY CASE ASSESSMENT SERVICE

Strategic partnership strengthens litigation support service offerings with a robust tool for Early Case Assessment

Nashville and Washington, DC—[Venio Systems](#) and [DSi](#), two of the leading providers of eDiscovery technology, have partnered to offer corporations and law firms best-of-breed early case assessment services.

A demonstration of their partnership and how DSi utilizes VenioOne's ECA platform is available at [VenioOne Early Case Assessment Demo](#).

“VenioOne offers an eDiscovery platform that prioritizes what we emphasize to clients: Find the most relevant documents as efficiently as possible,” said Lance Thieshen, DSi’s VP of Operations. “Attorney review is the most expensive part of litigation, and their tools effectively and defensibly eliminate data before that stage of a matter in a user-friendly manner. That allows clients to make better decisions quickly.”

DSi is a standalone provider of legal technology platforms that works with FORTUNE 500 companies and AmLaw 200 law firms across the country. Venio Systems is a leading provider of eDiscovery and data investigation software globally working with service providers to deliver better and faster insights throughout the entire litigation process.

“DSi has built its reputation on project management, client service and the ability to objectively recommend the best technology for any given matter,” said Arrestole Thapa, CEO of Venio Systems. “With this partnership, clients will benefit from two complementary eDiscovery companies that can streamline the entire eDiscovery process.”

Traditional eDiscovery services follow a model of keyword searches, attorney review, and significant duplicative review by outside counsel. With this partnership, Venio Systems and DSi will allow clients to deploy the [VenioOne unified eDiscovery platform](#) from the onset of a matter to effectively eliminate non-relevant documents, group families of responsive data together, and provide attorneys conducting the review a richer batch of documents relevant to the case.

DSi and Venio Systems already have active matters together, and the results have been promising.

“Our objectivity is one of our biggest assets—we recommend the best tool and workflow for the given data set,” said Thieshen. “The matters we’ve launched with VenioOne have provided outstanding results already. We’re seeing more than 95% data reduction with less time spent by attorneys during the ECA phase, which is exactly what we’re after.”

About DSi

DSi provides advanced eDiscovery and digital forensics services. Serving law firms and corporate legal departments worldwide since 1999, DSi’s services include predictive coding/computer learning platforms, data collection, data recovery, hosting, early data assessment, review and cybersecurity.
